Unknown speaker 00:05

I'm joined today by Andrea Cattineau, the Chief Executive Officer of Zenith Energy. Andrea, great to have you with us today to talk about Zenith and recent activity. Good morning, Rosie. Yes, indeed.

Unknown speaker 00:17

I want first to make a preamble. We are speaking about activity that is legal and specifically is in the arbitration world. We are making three arbitrations, of which one has just ended, and so we have to remember that arbitration is a very severe type of justice with a lot of months of preparation, and there is a high degree of confidentiality and independence.

Unknown speaker 00:48

And so for that reason, what I will say about this three arbitration in this interview is strictly what has been brought already in the public domain, specifically the ICC arbitration. They are private, so they are confidential, till the award, when he said that they exceed, which is the third arbitration we are doing based in Washington, as his own website, and the investor can follow the development in the website of exit.

Unknown speaker 01:18

So as you said, there's a lot been going on recently with the company and a significant increase in the share price pre-Christmas 2024. Tell us what's going on. Well, you know, the award that we receive on the 19th of December has shocked the market because the news that we are making to arbitration was disseminating the public since years and with adjournment every four or five months.

Unknown speaker 01:48

But the perception of arbitration sometimes among the public of investors, at least in Oslo and in London, is that it may take too long, that you never know. And instead, the fact that we had the full award with compensation not only for the invoice that we're seeking reimbursement, but as well the fees and interest that are running not only till now, but for any future period till we have received the first dollar,

Unknown speaker 02:19

the last dollar. So all that make a tremendous impact in the community. The second strike in the perception of the investor was the second award that we received only a few days later on the 27th was disseminated.

Unknown speaker 02:34

And so this second sentence, although preliminary, in exceed one, our third arbitration, arbitration number three, reinforced the confidence that we were doing great in the arbitration. And so the market went very hot suddenly.

Unknown speaker 02:54

Now, obviously a $632 million award would massively impact the company. Tell us when this is likely to be decided. So, the amount of 632, which comes from the calculation that our total claims, are now 642 minus roughly 10 of the first award.

Unknown speaker 03:13

This amount is split into arbitration, which are called ICC2, which means International Chamber of Commerce, for us the second two, and exceed one. These two arbitration, they have the following calendar.

Unknown speaker 03:28

The first is known as the trial at the end of February 2025, and then subsequently the court will take its time to process the information and the perception that they got during

the trial. It is expected that that will be in the end of the summer, but just as expected is just an indication by common calculations of arbitration timing.

Unknown speaker 03:55

The second one, instead exceed, is the one for which we have had a sentence in which officially the court asked the defendant to agree a calendar in a prompt way and forcoming. And so we expect that we should have within 2025 the trial, and then to have within the first half of 2026 the sentence.

Unknown speaker 04:19

So exciting times ahead for Zenith. Tell us what caused you to start such a large legal case, and what did the Tunisians do to cause you to take these actions? Before these exciting times, there were months of gloom and doom, because of course 2022, when we started the first two of these arbitration, were a very sad day for Zenith.

Unknown speaker 04:44

And Zenith has made a quite remarkable success in the period of 2021, the first months of 2021, acquiring two Canadian companies, which were working in Tunisia since many years, having invested a large amount of money there and these companies, they've lost their track and so even the government was searching for a new investor which we came, we made the acquisition and announced it between February and May 2021 of four fields,

Unknown speaker 05:23

sorry, of three fields and these three fields, Robana, El Biban and Ezzawiya were very promising fields which they were in production and they started immediately to produce our portion of oil and already in July 2021 with the total approval in favour of the government and of the ETAB, the National Oil Company, were supporting the first vessel.

Unknown speaker 05:47

Things developed, we started to make an important cap-explan and our new investment and leadership. Then the situation mysteriously went sour because in April 2022 when the price of oil was extremely already favorable after the invasion of Ukraine by Russia,

there were about 100 US dollars per barrel, and then our oil was produced, exported, in a vessel, but then the money didn't come to us, but was taken only by ETAB with legal excuses.

Unknown speaker 06:31

We were trying to mend this potential misunderstanding, was not a misunderstanding, and so after a brief mediation we started arbitration one, in which the original purpose, who limited, was only the recovery of the invoice not pay, 6.7 million dollars.

Unknown speaker 06:51

But despite that mediation they started even procedures to take away their licenses from us, and so then we started the arbitration immediately. In the meantime, in November after long legal process and due diligence, we have purchased CNBC Tunisia, China National Petroleum Corporation Tunisian subsidiary, CNBC, everybody knows is the largest state oil company of China, so a very important and well-run company in the world of oil and very respected,

Unknown speaker 07:31

and so we bought this company, we paid for it, but then when we went to manage it, surprisingly we couldn't even enter the building, and so we had oil in the port, we had receivable to be paid, we had the license of CDL Kilani, which is a marvelous field discovered by Alpha-Kitein years ago, but then ignored by the development of times by the new owners, and then because they had better things to do,

Unknown speaker 08:03

obviously, and then a great opportunity for us. And so this brought to us the regret because we have had such an important field, which could reach between seven and ten thousand barrels per day of production, which was ours and suddenly was not ours anymore.

Unknown speaker 08:24

So we started the arbitration number two. And then the continuation of illegal action against us in the other company, EPT, and altogether the fact that ourselves we made

an investment under an investment treaty made us make a recourse to the tribunal of dispute for investment breaches.

Unknown speaker 08:53

And this is called Exceed. Exceed is based in Washington, is in website... NIN, it appears, World Bank, which is the owner of the building where it sits. And so it's a very powerful organisation, focusing on the dispute for breach of investment treaties.

Unknown speaker 09:15

So I understand that Tunisia sequestrated your oil and then your oil licence. So tell us what this was all worth and what's taking you to take action for such large numbers. Okay, so we can speak very openly about ICC1, because I've been already awarded in the public.

Unknown speaker 09:34

So that was simply the invoice for the oil not paid of $6.7 million, to which then, of course, the sentence added all the interest and the cost suffered by us in the arbitration fees not paid by the counterpart.

Unknown speaker 09:51

So that is simple, $6.7 million originally, award of $10 million. In the case of the second ICC, ICC2, we are speaking about claims of $130 million. As I said, ICC is a more private type of procedure, so we cannot enter in great detail, but it's the fact simply that we bought a company with a licence of which we were the owner of 45%.

Unknown speaker 10:19

And this was a great field, which we already explained historically, the success of this field being discovered by Alpha-K10. And so the fact that the licence would have been for many years, and then the fact that the oil projections are still very robust for the year to come, these make easily $130 million, but we cannot enter in many details.

Unknown speaker 10:41

In the case, instead of XID, the thing is very simple. The XID is a separate type of investment arbitration, is the arbitration covering the bridge to an investment treaty. And in fact, XID means International Centre for Security.

Unknown speaker 11:00

settlement of investment dispute and so that is an umbrella situation in which all the companies and all the fields that we own in Tunisia which have been affected by various form of illicit activity which now we will list are included and so all the field projections are inside and then all the losses for non-payment of invoices which is another form of damages we suffer a tap never paid the oil we sold to them in the last five years and so But at the same time in the field that we are still formally maintaining Which are Robana and the ribbon demand that we make repair.

Unknown speaker 11:43

We make maintenance. We make safety So is a very sort of form of indirect sequestration in which we have to do all the expenses But we cannot have anything paid and we cannot sell even the oil we produce or the gas we produce.

Unknown speaker 11:58

So a variety of illicit and unfair behaviour under the investment. These covering all the field and covering all the period in future and the damages for these treaty breaches bring the amount to five hundred three million dollars for exceed alone.

Unknown speaker 12:18

Great, so those numbers make sense. What do you think are your chances of being successful in these arbitrations? Well you know first of all for a company like ours to engage in three arbitrations international, indifferent as well jurisdictions was the proof that we had the confidence of an extremely strong legal case and this was as well the opinion of the various advisors and lawyers that we contact first before pushing the green button and but the fact that we have won so well the first ICC1 is a confirmation of our perception and the fact that we are realistic nevertheless each arbitration case stands on his own feet there is a different court and and so we should with the trust and humility expect the decision of the court in ICC2 and DC3 but the fact that already one major international competition court has found that the merit of our case are true and that being in favour of our position is very comforting because the pattern of the behaviour of the ministry of mines and hydrocarbons of militia has been the same simply

to say forget it the license is not anymore yours and with the trait of a pen wipe out us from the parazon from the horizon so from the panorama so that I think that is the base in which we are very optimistic.

Unknown speaker 13:59

and we wait with faith to be compensated by justice. So once you have the rulings, how will you receive payment from the Tunisians? You know, there is a very good statistical fact which we know approximately because certain historical information can be lost, but in the last 40 years, Tunisia has always paid the arbitration cases that they have lost.

Unknown speaker 14:27

So this is a good track record, give us confidence that there will be an honorable attitude in paying these losses, this negative award for them. Of course, if that will not happen, we will have to make a course to enforcement, and our investors may remember that we made already a successful case of enforcement in 2022, of which we made the...

Unknown speaker 14:58

an RNS in which this money was eventually months later seized by us in Switzerland, but unfortunately that type of enforcement at the start of an arbitration was not steady enough to resist for many years waiting for the award and so eventually his validity elapsed.

Unknown speaker 15:23

But we have demonstrated that we have the competence and the technical skill and the energy to do enforcement if necessary. So what do you think success in these arbitrations will look like for the share price?

Unknown speaker 15:38

Well you know I'm not an analyst, a research analyst or a stock broker so I cannot give such an answer even approximately, but we can judge from what has happened so far. The market is very refreshed by our first of all steady attitude by the fact that we are able to keep this arbitration for so many years to finance them and so this is quite rare.

Unknown speaker 16:08

A lot of companies they lose their track on the way and instead we are showing that we are kicking everything that we have to do with promptness. The other thing that we have to remember is that we have a stellar legal team.

Unknown speaker 16:27

We have first a very strong British law firm, the branch in Paris because we should remember that these are all arbitration in French language but then since nearly a year we have the support of Professor Clais which is considered the top arbitrator of France, a professor at the Sorbonne and so with this stellar team we are very optimistic of the result and obviously reading these references, the investor's community is very confident too and so if we would win arbitration number two and eventually arbitration number three,

Unknown speaker 17:11

the amounts of these claims are so vast that even in case of some reduction will be impacting terribly our company and asset base and so the investors will certainly follow in their purchase of their shares in our company too and that will make a result.

Unknown speaker 17:31

They don't dare to go so far as make numbers in this. Great. Well, Andrea, great to speak to you as always. Thank you very much. Thank you for your time.

Unknown speaker 00:05

I'm joined today by Andrea Cattineau, the Chief Executive Officer of Zenith Energy. Andrea, it's great to have you with us. Good morning. So tell us about the recent ICC1 arbitration results and favourable decision that's been recently announced.

Unknown speaker 00:20

Talk us through the background to this decision and what it means for Zenith shareholders. So the ICC1 means international chambers of commerce, number one for us, and the International Chamber of Commerce in Paris is the centre where the biggest number of arbitration occur in the world.

Unknown speaker 00:43

And so it's a very important centre. And we made the recourse to this arbitration centre in 2022 when an invoice for the oil that we produce and loaded together with the tap, the national oil company of Tunisia, were loaded and then shipped and then sold and then paid, but not to us.

Unknown speaker 01:13

And so the tap, with a variety of legal excuses, retained the amount, the portion of the cargo that was produced and owned by us. So then after initial peaceful mediation talks, which were fruitless, we immediately made the recourse to our first arbitration, which started then in June 2022.

Unknown speaker 01:42

And as you can notice first, we have already had the result in December 2024. So it's only two years and now it's a time gap, a journey that is very reasonable for the magnitude, the complexity, not to the case, because the case was very straightforward, but as well of the documentation.

Unknown speaker 02:05

and the reasoning from various angle, Tunisian law, natural law that our good lawyers have produced in the meantime. We should say that good indication came already one year ago when the court, the arbitration court, which is composed of three arbitrators, condemned a tap for dilatory practice and to 120,000 euro of fines.

Unknown speaker 02:37

But you know, these are indications that especially in the first case of our experience, we never had, as Zenit and arbitration before, were seen by us immediately and as well didn't cause any reaction from the market.

Unknown speaker 02:53

This instead has been, in the 19th of December announcement, a very clear victory. Because a part of a minor adjustment in the... invoice calculation a tiny amount we have had a full-fledged victory not only the amount due to us will be payable in full but as well the interest as we were supposed to be paid in May so the interest has run from that date till the 19th of December and will continue to be calculated mindfully compounded till the day which we received the last dollar.

Unknown speaker 03:34

On top of that we shall remember that the Tunisian never paid a penny of the arbitration cost which is something permitted by international rules but of course is awkward for somebody trying to recover the money because not only you have lost your money but you have as well to spend a lot of money in arbitration costs not only for you but as well for the person that didn't pay you the money so it sounds very initially difficult and then you have to remember that we are a junior company in London fighting attacking a sovereign so to attack a sovereign is of course David against Goliert because you are

just an individual company made of a few thousand shareholders interest but against a state so that was a difficult start when we had not the money that we invested because to produce this oil the 6.7 million dollars of oil we have spent a good part of it in drilling in workovers in transportation in technicians in safety in environmental equipment and maintenance so all of that not only was not repaid the profit was lost but the And then we had to spend two and a half years of lawyer and abdication court.

Unknown speaker 05:07

So it has been a very long journey that I look now with pride, because it's been very difficult from the start to make this journey and to win it. So now we are in the final leg of our process, which is to enforce the award.

Unknown speaker 05:27

So we are at the full award, which is an executory that is an important portion of the picture for our investors. It's not like sometimes injustice that then there are appeal and counter appeal and then delay.

Unknown speaker 05:42

And then now we can execute our award if the defendant doesn't want to pay. To be fair, we should say that historically, in the last 40 years of record, Tunisia has always paid when they lost in arbitration.

Unknown speaker 06:02

So there is... a track record that Tunisia may be willing to pay and we would welcome this payment with open arms. So tell us about the ICC2 arbitration as well. So what has been surprising is that not only we have had the injury of the first non-payment of the cargo that we have loaded of oil produced by our three fields that were involved in that shipment.

Unknown speaker 06:39

But we have as well been deprived soon after of the license, which was the final bit that we were still controlling, the license of the CDL Kilani. So a brief history of what is CDL Kilani. CDL Kilani actually was the reason for which we developed an interest in Tunisia, because we were informed by two majors that they wanted to exit Tunisia.

Unknown speaker 07:12

We declared that we were interested. We came to visit in Tunisia, but in the meantime COVID started and so we had to labor through to stay in and out in Tunisia where there were very difficult health conditions because we couldn't, if we were in North Africa, return to Europe.

Unknown speaker 07:37

So North Africa became rapidly a red zone when instead Europe was accepting only visitors from green zone. So we were stuck, if you want, in Africa. The only thing that at that time we had as well a field in Congo and Congo, which was considered instead for whatever health reason green.

Unknown speaker 07:59

So we could travel from Tunisia to Congo and then come back some times to Europe. So it was a quite intense period, 2020 and 2021, in terms of survival, as you all remember. But then staying there, we noticed that there was other opportunities.

Unknown speaker 08:21

So we bought two Canadian companies that were the ones that generate the production, which has been the object of ICC1. But then, going back to SLK, CDL Kidani, we finally completed CDL Kidani in November 2021, paying the nature that sold to us, the company containing CDL Kidani.

Unknown speaker 08:46

And this was quite a great acquisition, because not only we bought this field for our percentage, which was 22.5, but we bought as well the right. to buy the other partner, if the other partner didn't want to continue, which indeed didn't want to continue, so left to us 45% of the field.

Unknown speaker 09:11

This field has been a great field discovered by one of the best explorers of all time, Alfa Kitein, the predecessor of French government oil activity, which discovered this field, which was a large field, then when Alfa Kitein reduced her presence in Africa, was sold to these two majors that then sold it to us.

Unknown speaker 09:37

So it's a great potential field with a large upside, can reasonably reach 7,500, 10,000 barrels per day and the proper activity. So we are very enthusiastic for that. We paid, we bought it, on top of it, we got a large stock of oil in the port of Lascira and then receivables.

Unknown speaker 10:03

And so we were very proud of this acquisition. Unfortunately, in June 2022, even this acquisition was in practice wipe out. And in August 2022, the license was given by the state to themselves to attack the national oil company.

Unknown speaker 10:23

So then we had no other choice after the usual mediation talk to start the second arbitration. So the fact is that eventually we have had three arbitration, as you know. And so the second arbitration is possibly our best case, because first of all, there was a proper due diligence.

Unknown speaker 10:47

We have negotiated with this state authority of the major selling it. Everybody knew that was perfectly legal, especially the seller, which is a major, so would not do anything. against even marginally against the law.

Unknown speaker 11:06

We have had in the meantime purchased already APZ and DEPTE with the same method, so we were just copy passed, used the same method which one year before was totally approved and upload even when we bought it and so we replicated this paperwork but this time instead for mysterious reasons didn't work and so we had to start a second arbitration, obviously for the reason that I described to you that it is such a great field,

Unknown speaker 11:35

the value calculated by the values quantum aspect are much bigger, there are 130 million dollars and this is even more the same respect of the potential of this field because to appreciate that the license will be for 25 years, so 25 years producing potentially 5, 6 prudently instead of 10,000 barrels makes a lot of money.

Unknown speaker 12:01

So even 130 is not shocking at all, is moderate sums but appropriate for a calculation made by two concurrent expert, one in Canada, a petroleum engineering firm. You know, Calgary is with Houston the biggest centre of the world of oil technologically and has opinions and expertise and then another in Paris.

Unknown speaker 12:28

We have to remember that all these arbitration are made in French language because Tunisia is a French speaking country, so the law provided that we use the law of the defendant. And so that is already a process, the final paper has been introduced in July 2024 and the trial is at the end of February, so in just one month.

Unknown speaker 12:58

So it is amazing how times flies, we started that as I said in summer 2024 and already by February 2022 and already by some February 2025 we will have the trial completed, then the court will process the work of the trial and after a few months issue a second award.

Unknown speaker 13:24

So Andrea talk us through ICSID arbitration as well. So now we are right to the third arbitration, which is an amazing number and you know very rare that a company has three arbitration against the same counterparty and so this Exceed, Exceed is called in his website Exceed World Bank, so that gives the nature of this institution based in Washington in the building of the World Bank and the International Centre for Settlement of Investment Dispute,

Unknown speaker 13:57

so it's a different thing from the ICC because in this this type of arbitration, the focus are the breaches made by the defendant, accused by the applicant, which is Zenit, of the investment treaties.

Unknown speaker 14:14

And so our specific investment treaty cover all the breaches that the Tunisians have done against EPZ, Ecomet Petroleum Ziz, EPIT, Ecomet Petroleum Tunisia, and Canadian North African Oil and Gas, so the three companies that are together owning four fields.

Unknown speaker 14:35

So that is a comprehensive, if you want umbrella arbitration, is not only important for this arbitration, the fact that somebody has not paid any voice, or somebody has not made a certain delivery of oil, is more as well the together of these damages and the breaches to the investment rules.

Unknown speaker 15:01

which Tunisia signed. So it's something that is more the protection of investors and that is the reason for which the amount is much bigger is 503 million dollars because it's comprehensive of all the other activities and breaches.

Unknown speaker 15:19

And so normally it's a very lengthy process because you understand it's in Washington and is bigger but instead has taken a rapid development with the sentence that has been communicated on the 23rd of December.

Unknown speaker 15:34

First of all we were very pleased as Christmas present to receive on the 23rd of December another sentence. This is an initial sentence but still is a sentence and it is initial sentence show as well the time keeping that the court has decided to look after this case because in the sentence there is an explicit demand to the counterparty not to delay matters first and to arrange the calendar of the final trial within the 20th of January.

Unknown speaker 16:12

So the arrangement will be made between the parties and when public will be communicated to the investors. So that gives a very good flavor because of course an initial sentence is just initial but as we have seen for ICC1 the initial centre in ICC1 was confirmed in a very heavy final sentence so we hope that will be a similar case.

Unknown speaker 16:36

Then the amount is very large five hundred three million dollars and instead of being very distant is something that will be debated most probably in 2025. Fantastic so what does this actually mean for zenith energy and the success of the time.

Unknown speaker 17:01

the feeling of what the court's impression are, are all positive with all the respect of justice, which will take its own course and the judgment will be done, of course, conclusively after months of debate and the meditation by the arbitrators.

Unknown speaker 17:22

But I would say that for the investors, there is a clear light that is not, God knows when will happen, maybe in a few years, arbitration is very difficult, you never know how it ends. So the thing as shown to our public of investors, a phase so much more practical and in line with reasonable timekeeping and with the fact that is transforming our company as the four field that we have legally purchased spending money.

Unknown speaker 18:01

and manage for nearly two years. Indonesia would have changed the company because with the production of few thousand barrels, it would have been very nice, especially after the increase of energy crisis in 2022.

Unknown speaker 18:17

So the investors clearly see that there is a way of justice and then the amount as it is, obviously, the case would be even bigger than what we would have had if we were not robbed. This is normal, no?

Unknown speaker 18:35

If somebody suffered damages, the damages are not only the returning of the toy, which has been broken, but as well some other compensation for the fact that the toy has been broken. So I think that everybody start to see that the thing is real and that the magnitude, which is now in total 642 million American dollars, will more than compensate the suffering of our shareholders.

Unknown speaker 19:07

So finally, let's talk a little bit about Italy. Talk us through your energy production activities there. Well, you know, after all these battling, of course, our energies in looking for new acquisition around the globe are reduced because we have to remember that for the management, the work in preparation of three arbitration, which is a number that I repeat is very rare, have been very consuming.

Unknown speaker 19:33

So we are trying to keep our origins very near. So we have an excellent production in Italy of electricity and natural gas. Both of them are considered very ecological at the moment because there is, as we know, all a shortage of energy in the Western world.

Unknown speaker 19:53

And so then I think that we will try intensively to buy some other properties in Italy. And these, will be very comforting for the shareholders, as there are no legal issues with ownership in the Republic of Italy.

Unknown speaker 20:11

So in result, certainly then it is not closed for additional ventures in other parts of the world. We are continuously looking for these opportunities, but 2025 beside the acquisition in Italy should be mostly a year in concentration in finishing the arbitration with the encashment, which we hope by way of settlement, but otherwise we are very prepared to make that by way of enforcement.

Unknown speaker 20:44

Well, Andrea, we look forward to hearing what happens in 2025. Thank you very much. Thank you.

Unknown speaker 00:10

Hello and welcome to Zach's Traders Cafe. Today I'm joined by Andrea Cataneo, who's CEO at Zenith Energy. How are you today, Andrea? Very well, thank you. Well, you're doing well today and your share price has done well over the last two, three months.

Unknown speaker 00:22

I think it was up 10x at its peak from near a penny to nearly 12 pence. You've raised some money and presumably the market's enjoying the idea of you potentially winning your arbitration in Tunisia. Well, you know the arbitration are tree, which is a great comfort because you know the majority of cases where a listed company is holding an arbitration process is with one case, when instead, for a variety of reasons,

Unknown speaker 00:50

our arbitration are three and this give the comfort of a multiple run of options and then at the same time offering a part of the illegalities that we suffer which is the same. So the fact that we have won already the first arbitration in total dimension of penalties and interest to be reimbursed at the high interest rate until the last penny that will be owed to us under ICC1 gives the reasonable expectation as the illegalities follow the same print to see a positive result in ICC2 and exceed one.

Unknown speaker 01:37

ICC2 will be having a trial at the end of this month. Right, so you've won the first arbitration and there's interest running on that from the time of the announcement? No, the interest has been calculated from the day of the breach, so the May 2022, but then in addition they will continue to run monthly capitalize till the day the last dollar is paid.

Unknown speaker 02:03

So it's effectively backdated and then going forward as well. So it's a double win. Double win. Right. And so these situations historically with other companies, and there are a few companies on the market with arbitration situations like this in the market, they tend to be sort of binary bets and then there's a timeframe which could be all over the place.

Unknown speaker 02:24

It could be a year, it could be five years. Your situation is different from that. It seems so. You know, we are very pleased to report that justice still exists. And so we have had a very positive award which represent the reality and bring back us to a situation before being hit by the sequestration and where our money was taken away and our oil was taken away.

Unknown speaker 02:52

And so this is very comforting to have trust in the processes of the concept of arbitration. And so we are then following with a second and then with the third. But as I said, the path of the illegalities is the same.

Unknown speaker 03:10

So it's reasonable to expect that the same crime will be punished in the same similar way by different courts. And then furthermore, the second and third arbitration are of much bigger dimension. So the first one was around $10 million and you've got that under your hat.

Unknown speaker 03:33

The market value of your company, market cap went up from about $2 or $3 million to about $23, $24 million now. So the market is up with events. The next ones, the next potential arbitration wins are much greater than the 10 million.

Unknown speaker 03:47

Indeed. The first arbitration actually was initiated for only $6.7 million, which was the amount of money that was not paid to us unduly. But then the sentence has been making the full picture of the damages, which is not only the fact that we were not paid in 2022 some money, but the damages financially, so the interest, the cost of arbitration, so all the costs we spent for them and for us, and then the lawyers' fees.

Unknown speaker 04:17

So instead of 6.7, we arrived to 9.7, which is an increase from the original claims of 45%. Right, so we're looking forward this month, as soon as February, we're looking forward to the second arbitration result, which is tens of millions.

Unknown speaker 04:35

It's $130 million, the claims, and reasonably subject to the consequences of the arbitration process. So additional costs for arbitration, additional costs for lawyers, additional costs for interest.

Unknown speaker 04:50

The only fact that this will be applicable not to 6.7, but to 130 million. Right. And any chance that the Tunisians might just say, Andre, you're a nice guy, we'll just give you the money. Thank you very much?

Unknown speaker 05:02

Well, yes, definitely. This will be the normal course of event. And the Tunisians have always paid their arbitration losses when they've been defeated in court. So there is a good track record for the last 40 years.

Unknown speaker 05:20

And so we are expecting that. But at the same time, we are not sitting with our hands in the lap like today. And we are doing a lot of things, which is preparation of recovery and enforcement. And that's why you've raised some money today over the weekend.

Unknown speaker 05:42

There are costs associated with that. Legal costs are horrendous all over the globe. And so then we have to have a good Fed purse, which we have refed during the months of January and February. I would say that as well, the turmoil in the market that may take place, general global market, in the next two, three months, is less significant for us because we have already put all the fuel in the tank.

Unknown speaker 06:19

Right, so you've raised just under £3 million, that kind of thing, which gives you a fighting fund for what you want to do or for the arbitration. Are you going to use any of that for oil and gas investment or is that just really your fighting fund?

Unknown speaker 06:33

Well, you know, the use of proceed is mainly the arbitration use, but of course, being well in the cash, we can initiate some transaction of acquisition of oil and gas or electricity properties, which then will be financed by some leverage acquisition finance.

Unknown speaker 06:53

So we are not using the cash of the investors for anything that is mainly the arbitration fight, the tree fight. But nevertheless, we are still active in looking for acquisition as an oil and gas company and energy for the future.

Unknown speaker 07:11

So we may look as well to the third activity that we do already in Italy, which is electricity production. Right, but I mean, basically, you're an arbitration play now. If your ships come in, all three of them come in, you'll have $600 million in the bank.

Unknown speaker 07:26

Wouldn't you just say, you know, thank you very much to the shareholders, give them a bit of money, retire and go to the Bahamas? It's not like me. No, I am not enjoying to the Bahamas. I prefer the city of London.

Unknown speaker 07:38

Right, so there is a strategy, once you've won the cases, to actually become maybe a mid-tier oil and gas or energy production company. An energy mid-tier company, absolutely. And is the focus on sort of renewable energy or is it could be anything?

Unknown speaker 07:54

Well, anything that is not green wash, something that is serious. For example, we have started to look at uranium, which we believe with the new concept of mini central power station, which will be sometimes as small as a container, will make again sense.

Unknown speaker 08:16

There will be less fear in the public about the explosion of a big nuclear plant like Cernobil. And so with this technical evolution, uranium can be again very much in demand for smaller projects, while instead in China and all over the world, there is a return to uranium anyhow.

Unknown speaker 08:39

Then there is electricity production in Italy, which at the moment we are doing with the natural gas, which we can do in the UK as well with natural gas out of the grid in this case. And then we can as well make some photovoltaic.

Unknown speaker 08:53

We are not for big projects that are very capital intensive, which will take 25 years to reimburse the investors. And we want to use what we have affirmed as a brand of the company, our opportunistic ability to buy assets from companies that leave the panorama, what we have done in Italy, buying the 11 field from what was at that time Italian gas, PLC, and then they left Italy and we bought all of these for a negative consideration and is still producing cash today,

Unknown speaker 09:33

12 years later. And then the purchase of AAOGC only asset in Congo, which is producing a very nice opportunity, at least, which is the SMP trial, which will be in Paris in March for the amount of $9 million.

Unknown speaker 09:50

And then the acquisition for the initial small amount from CANDEX. So in terms of what you're going to do once the arbitration is settled, it will be a mixture of the old familiar Zenith strategy of maybe getting distressed assets in out-of-the-way places or going into maybe the more stable jurisdictions in terms of delivering energy security for those countries.

Unknown speaker 10:20

Absolutely. I would say that I will pick up on your last word, countries. We should have a list of countries where we go, which will be much more selective. Our downsizing of our market cap in the last four years was mainly due to the fact that we were badly treated in two jurisdictions.

Unknown speaker 10:44

So we have to avoid that again in the future in a way that we don't lose credibility for the mistake of others or for the actions of others. In this line came the acquisition of Leopard Energy in Houston, an American small listed company that will certainly can host American asset that with the new Trump administration, they are again in favor.

Unknown speaker 11:11

And then with the market that for American listed company can be very positive. As well, we can go to Argentina, for example, where the spatial relation between the president of Argentina and Trump can favor an American investors, among others.

Unknown speaker 11:26

And then instead, we can continue with what they call the opportunistic purchase attitude, which is using intelligence to discover that something is becoming suddenly available for external reason and jump on it.

Unknown speaker 11:41

The company has always been recognized as a very speedy processing machine for buying companies with legal and accounting due diligence made in a rush, but still safely. And then, of course, production of energy will be our mission without making phantomatic quick transition, which are not in the cards.

Unknown speaker 12:10

We are an honest fossil producer, which is not ashamed to be a fossil producer, but at the same time, happy to be a green producer when it's possible. So is there any way, I mean, you're known for like going for these, let's say, high-risk, high-reward situations, whether it's distressed companies or jurisdictional risk.

Unknown speaker 12:30

Is there any way of mitigating that? Or understanding what the value of a distressed asset is, which is one skill. The other is if there's a jurisdictional problem, then you have the team to fight back and win your case.

Unknown speaker 12:44

Are you happy with that strategy or would you prefer to have an easier life in a safer place? No, it's a perfect question. And I think that the solution will be, in the case that we are looking, for example, in a difficult country, is to have a great partner, a sort of sovereign rich fund that will permit to absorb any up and down of the exotic location of the asset and still permit to take the advantages of upside,

Unknown speaker 13:17

but without the total uncovered bag, but with some cushion for our investment. Well, we look forward to more news on your arbitration, and we'll see how much you get in your kitty by that time, hopefully in a month or two, etc.

Unknown speaker 13:33

In the meantime, Andrea Cataneo, CEO at Zenith Energy. Thank you very much indeed. Looking forward to seeing you again with more news.

Unknown speaker 00:00

Hello and welcome to Zach's Traders Cafe, today I'm joined once again by Andrea Cattaneo, who's CEO at Zenith Energy. Hi, today, Andrea. Well, good morning. Last time we met, we were on the edge of our seats waiting for arbitration news from, well, by the courts from Tunisia.

Unknown speaker 00:17

Are we still on the edge of our seats? We are well seated today and relaxed. I am back from Paris where the hearing of the ICC2, what we call ICC2, so the second case against Tunisia, the Republic of Tunisia as a Finnish and is a public hearing with the contenders and so the defendant and the attacking parties in it.

Unknown speaker 00:47

And so, as you know, is a very confidential matter, but at the same time, we are a leasing company in three stock exchanges. So we have obligations to report and so I am in a very walking, a thin rope between what I want to say and what I can say, but my face should speak by itself.

Unknown speaker 01:12

I am very happy of my trip to Paris and we had the wonderful weather, first of all, which is rare in Paris and the wonderful food, which is common in Paris, but as well, we have seen justice winning because we have been able to explain our case throughout.

Unknown speaker 01:36

Powered by Notta.ai

So we are allowed to our values expert and our lawyers, which are top lawyers, as you know, the most famous arbitrator in France is one of our lawyers. So we were able to explain our case and that is itself a great result because first of all, our case is very strong.

Unknown speaker 02:03

And second, you know, we have been subject in Facebook, internet, mail, local little papers of defamation by the counterparty with a lot of acquisition, like saying that we are a $1 company, which is the most comical acquisition for a company listed in the main market of the London district exchange, we have seen various things, but not the $1 company listed in the main market.

Unknown speaker 02:34

So that that, so I think that the fact that the facts as being allowed to be explained and presented, and the justice has made its course and reinforce our confidence in justice that are already great result.

Unknown speaker 03:01

And first of all, as a human being and member of the society that we are today, the fact that justice triumph is an incredible result and not so daily in the news. And then second is the fact that our case could be explained as a second success.

Unknown speaker 03:25

Well, you said you can't say very much. And, you know, that makes sense, given the stock market rules and everything else. You can't say anything which would have a material impact at this stage. But you have already won the first stage of your arbitration, $10 million or so.

Unknown speaker 03:41

You're not a $1 company. I'm like 20, 30 million pound company. There's up to or a bit over $600 million up for grabs potentially. So, you know, you are in a good place. Is it? I mean, one of the things I didn't ask you last time, is it the case?

Powered by Notta.ai

Unknown speaker 03:57

Why are tunis here even fighting this? Why don't they just say, here, Andrea, here's the money. You know, this went wrong. We're sorry. Take the money. Why aren't they doing that? But, you know, it is a good question.

Unknown speaker 04:12

I would say that maybe instead they are preparing that, you know, I've seen very courtesy smiles and deep handshakes which with certain representative of the delegation. So they may be already thinking with their own time that the best solution would be to do a settlement.

Unknown speaker 04:41

And this, of course, is another element that animate our hearts. First, the search for justice and the search for recovery in what we have been taken away and which is, I think, for people that have been damage, the sense of justice is a great motive, but then there is as well a great desire of peace and concentrating in other business like acquisition of oil which suddenly has become a gaining fashion even in the city and so we are permitted to say that we are oil producers without being thrown eggs in the face.

Unknown speaker 05:23

This is a great achievement of the last days, but I think that you know buying more natural gas, buying more electricity station that we are already doing in Italy as you know we are producer of electricity, so it is a great use of our time and so if we will have a settlement we will accelerate our acquisition campaign which is already in motion.

Unknown speaker 05:50

We are at the moment making offers for various assets because we are very much a producer. not a legal company, but at the same time, I think that these things, agreements, settlement, they have their own digestion time.

Powered by Notta.ai

Unknown speaker 06:09

So let's then digest what they perceive to be at. And then, you know, why not to make a settlement? We are not belligerent by chosen way. We are belligerent because we have been sequestrated. And then of our asset, then we want the damages paid back.

Unknown speaker 06:33

But is it the case, getting back to my question, is it the case that in a way I'm the Tunisians or there's a court case because it's not just a matter of whether money is due or should be awarded, but actually the court is probably looking at or thinking about how much is due, so whether it's 100 million, 200 million, 500 million, et cetera.

Unknown speaker 06:52

So the process is maybe not so much whether Tunisia will have to pay. It's just how much it would have to pay. Yes, it's a question as well of quantum. But, you know, it is not a complicated quantum.

Unknown speaker 07:07

Our case, which is known because the content of all our complaints is in the accent, which is a public procedure versus the ICC, which is a private procedure. And and the exceed of Washington is that we have been taken away in our oil and asset and this oil and asset that they have a value that is very easy to determine, you know, is not an invention or not a sort of fine distinction in interpretation of the law is the fact that you had this pair of shoes and then you are without pair of shoes.

Unknown speaker 07:50

So then, you know, you go to to church, you ask how much it costs a new pair of shoes and then this is the amount of damages. And the other point I think is, you know, let's assume, I can assume, you can't say anything, I can assume that you get X amount, X millions and they go into your bank account.

Unknown speaker 08:11

Powered by Notta.ai

So, you know, currently your 20 million market cap shares of 6, 7p, you win, you know, there's an announcement in coming weeks that you've got, as I said, X amount, the shares of 50p or a pound or whatever it is, you've got all that liquidity, would that liquidity go back to shareholders or would you start buying other assets or would you just, how would you play it?

Unknown speaker 08:33

Would you buy everyone champagne? Well, what's the strategy at that point? Because in a way, that's a nice problem to have. Yes, a nice problem to have. But I think that the most important thing that we have to demonstrate that we are for the long run.

Unknown speaker 08:47

So, the long run means that the company, the Senate should have a great mean to continue with cash. and the means to make a position. So that would be an important thing. So we are not just a legal shell that then we distribute the money and finish.

Unknown speaker 09:07

Zenith has his corporate identity and will continue to thrive with the new cash. But the shareholder, especially the old shareholder, but the very past or the new shareholder, they have suffered or somebody has not suffered but simply invested on us recently and does all the right to be rewarded for this investment.

Unknown speaker 09:29

So certain the company will make some form of investigation or now to best distribute part of the victory. And that I would say that requires some accounting and some securities study because there are shareholders from two continents.

Unknown speaker 09:53

And then if not three, maybe there are some investors who are in Indonesia. And then these investors, they may have different fiscal and delivery of payment necessities. So we should discuss between a dividend, the return of capital and things.

Powered by Notta.ai

Unknown speaker 10:13

So aspect will be at work, but certainly the inclination of the board is to reward the shareholders for that investment. Well, they've already been rewarded to some degree with the shares, I think in the autumn of one and a half pence.

Unknown speaker 10:27

So they went up to 12 pence at one time. So it was nearly a 10X or a 9X recovery. Are you, what's your view of the stock market reaction so far? Because obviously we're in a very difficult market with small caps.

Unknown speaker 10:39

Do you think that you finally got the appreciation that you maybe were looking for over the years? Well, you know, certainly we are very pleased of the reaction. We shall say that we are very pleased with both stock exchanges, but certainly the prime role has been played by Aeronext because the, The liquidity in the Aeronext is 10 times the one that in London, and that of course liquidity has driven the success of the company price,

Unknown speaker 11:10

leading sometimes Oslo the price in London by 10%. And so that 10% gap. So then London catching up behind. And so then we are very pleased with our presence in Oslo. When we did it in 2018, a few people, they were raising their eyebrows, but the Oslo boards has proven to be a great help for our development.

Unknown speaker 11:39

But we stayed in the TSXV even when our activity in Canada was finished for extra two years. Because we are very loyal, and so we are very affectionate to our listing in the London Stock Exchange. So we are...

Unknown speaker 11:57

Powered by Notta.ai

certainly going to develop that further and so the two things together works very well. So finally I said that we were sitting on the edge of our seats and presumably as each day goes by we are looking forward to see what will happen.

Unknown speaker 12:14

This I think you've said before is the sort of the arbitration process is not a long one. I mean it's weeks rather than months. Or how would you describe the timeframe? No, you know this is the second case and the second case has its own route, has its own mechanism but is very similar except for the amount of claim which in this case is 130 million and the first case was 5.7 but with the same complexity.

Unknown speaker 12:46

I would say that the first case was very complex for such an amount and the second case is similarly complex but the amount is 20 times and so the first case which we can speak because it's an award so it's totally public.

Unknown speaker 13:05

The first case the claim was 5.7 and then the award was 9.7 million dollars which represent a 45 percent increase and so this case will have its own course and in timing which is what you were referring to we should say that the first case was advocated so the hearing was in the end of April and we had the result in the end of December so it was an eight months gap and this is a time framing which we should suit the result in this case.

Unknown speaker 13:46

And so maybe this is a subtle question maybe too subtle for you to answer but is the result of the first case and the process of the first case so that was a win, does that affect the second and third cases, or are they as if you're starting from scratch?

Unknown speaker 14:03

Powered by Notta.ai

Well, you know, this depends very much in interpretation that each court will make on its own. But because, especially for the third case, the case in Washington, which is, let's remember it, is a case against the treaty breaches made by the Republic of Tunisia.

Unknown speaker 14:25

And there are between investment countries like United Kingdom, USA, Canada, and emerging countries receiving the investment. There are treaties that normally occurred in the year 60s or 70s when there was a start of investment move between the developed world and the emerging world.

Unknown speaker 14:49

There are very severe, in case of the one we are applying in this one, a rules. And when these rules are breached, there are consequences and damages. The case of the one is very much similar to the case of the two and to the case of the three.

Unknown speaker 15:10

So the third arbitration. So this case is being all very similar. And in certain cases, the one of in Washington recurrent will use, obviously, the sentence of the first one to ponder the decision on the third case.

Unknown speaker 15:29

Well, we look forward to the next two cases and hopefully we'll meet up and toast or whatever emerges from those. But in the meantime, Andrea Cantoneo, CEO at ZLF Energy. Thank you very much indeed. Thank you.

Speaker 1 00:11

Hello and welcome to Zach's Traders Cafe. Today I'm joined once again by Andrea Cattaneo, who's CEO and President, apparently, of Zenith Energy. How are you today, Andrea?

Speaker 2 00:21

So far. Thank you so much. Good morning. And so I am glad to see you again, because we have communicated news yesterday that I wish to comment.

Speaker 1 00:38

and that's on the electricity front.

Speaker 2 00:41

Yes, you know, the best thing we have done industrially in the last 12 years has been the production in Italy with the acquisition of many fields at the negative price, which has been a very good deal that has gone unrecognized. And then in the years, the fact that the production has blossomed, and then we transform it roughly into 2014. So just now 10 years ago, in a production of electricity from substandard gas that otherwise would have sold at minimal price. Instead, with the ownership of turbines making from this substandard gas electricity, we have done A, an ecological function, because this substandard gas could not go into the national grid, in the national number A, the system, and B, could not be sold at profitable prices. Instead, burning our gas, ourselves with the German turbines, we could make electricity, which we distribute in the grid. And because the fact that we are producing from mineral sources, not from gas produced by others in the national grid of gas, we have obtained the permission to work 24 seven without interruption, because a field cannot have a stop and go. So that has been a very successful story, but has been left always a little bit aside in our story, because it's not of grand dimension. So now we have decided to ramp it up, and to make of what we have

done best so far, with success, to make it a bigger story. So we have raised some capital, because we are looking at the main acquisition in the front of electricity producing asset, mainly photovoltaic, but as well from gas, so both fossil and, and renewable. And, and we are having a little bit of breath in time, in our very intense life, because the next arbitration we start in spring 2026, as communicated, so there will be time while we prepare as well additional paper every month for this third arbitration in Washington for 503 million dollars, dollars, forgive me, and in Washington, then we have as well the time to make some acquisition to reimburse refer to our production of electricity, our turnover, and make bigger our total footing of the balance sheet. And so this is the reason for which we raise some money. Yesterday, in a way that we can promptly part pay, and then complete the acquisition of the chosen, the to be chosen, industrials.

Speaker 1 03:54

But there might be some people saying, well, you're going to be winning five, six hundred million in the arbitration. Why are you you can just put your feet up?

Speaker 2 04:04

Well, you know, the point is that we don't want to ramp up borrowing, and so then we need to have to pay temporarily the money from the other solution that is equities. And then we will have a cash flow from this production. You know, it's $2 million that we have raised, equivalent in Norwegian Crohn. So it's not a high delusion. It's the price of the place that has been still above one knot, so one knot. And so I think that we have done the right things at the right time. The 31st of March in 10 days is the end of the year. So we have as well to show the liquidity in the balance sheet and improve our ratios. So the timing was perfect to do something that came as a sudden opportunity presented by others.

Speaker 1 05:13

So, you're still obviously fully confident of the arbitration result whenever it comes, or the results. You are still pushing ahead with your energy strategy in the electricity area. And you've also topped up some shares yourself. You own over 10% of the company.

Speaker 2 05:34

Well, you know, as much as I can, with my means, I've demonstrated that I invest in the company. In this case, I thought that was more right instead of participating to any place

in any convenient conditions, the sweetener to new investors to buy it in the market. I may continue to buy in the market. And obviously, my interest, like the interest of any established order, is to have as many shares as possible to participate to the final bonanza of the distribution of part of the arbitration proceeds.

Speaker 1 06:16

and presumably you will inform the market as news develops in that area.

Speaker 2 06:22

We are, as you know, very frequent in our communication with the market, not only by NNS, which average at two or three per month minimum, but as well by way of using media like Zach Cafe to give a color to the formal communication made by NNS.

Speaker 1 06:46

Andrea Cattineau, CEO at Zenith Energy. Thank you very much indeed. Thank you for your time.

Speaker 1 00:01

Hello and welcome to Zach's Traders Cafe. Today I'm joined by Andrea Cattineo, who's CEO and president of Zenith Energy. Hi, today Andrea.

Speaker 2 00:10

Thank you very well.

Speaker 1 00:12

You must be quite busy at the moment. Recently, Zenith raised capital for a new acquisition, or newer acquisitions. Can you tell us what you are acquiring?

Speaker 2 00:25

This was specified during the description of the use of proceeds in our press release announcing the capital raise. We are making acquisition in the space of electricity production which has been so successful from our gas field in the need of the previous decade and so already 10 years of success in making this electricity production but now instead of being a fossil electricity production is something coming from alternative energies and so more green and more in tune with the time and as well in the space of investors and so we have the electricity bit already within our knowledge but we don't have yet a full understanding of the production of photovoltaic or other form of electricity production which is sustainable and so is what we need to do now and we may do a variety of asset purchase which permit us to grow without risk this craft and considering as well that we are in a very safe environment in Europe so we are not risking anymore the repetition of what happened in Tunisia that caused the three arbitration.

Speaker 1 02:01

And some might say that given that you're in the run-up or potential run-up to winning or receiving five or six hundred million dollars worth of cash from an arbitration, why are you raising money now instead of just waiting for those funds to come in?

Speaker 2 02:20

is a fair question but the answer is very simple and straightforward. We don't want to lose any moment to increase our industrial activity and not only the arbitration activity for various reasons. The first reason is that the companies to profit at best of the arbitration that we have one one the other progressing needs to be as well a credible industrial player in a way that people don't think that we are just arguing over compensation but we are not an industrial entity ourselves. So the fact that we have to beef up our balance sheet and our industrial identity is very important even to achieve the best result especially in the third arbitration which I remind everybody is for 503 million dollars of claim so far. And then we have the comfort that we have done always very good acquisition. The acquisition in Tunisia has been extremely profitable made with carriage in a difficult time the COVID the one in Italy was even better because it was without accidents and was implying a negative consideration. So we were paid to buy something that of course they thought was not valuable and that does demonstrate in the following 14 years that has been extremely valuable. So that is something that we are confident and the alternative energy space and electricity production space are capital intensive activities so you need that to have the money ready to pay if you want to win the difficult competition in buying the right asset. So that was the reason for which taking the opportunity that we had suddenly to raise some money has been a must.

Speaker 1 04:33

So all of this adds up to you carrying out business as usual with your day job. But does it mean that you're still confident in the outcome of the arbitration, even though you're pushing ahead with your energy strategy?

Speaker 2 04:49

Well, I would say that, you know, as any war the arbitration battle that we are doing since the three years has enhanced our capacity to work harder and our sense of time and the necessity of acting with an urgency to deliver to the shareholders a result. This was very much our karma during the period in which the arbitration started when we

were just sequestrated of our asset but without having any certainty of the success that we are having now. So I would say that we became much more as a team hardworking and even more committed to the success of the war story and so that is the reason for which we find time now in a pose that there is between the end of the yearning of ICC2 and the start of the yearning of XC1, the third arbitration, to have some time while we prepare all these paperwork for XC1 to have an acquisition campaign. So I think that it is perfect. They give us more confidence even that we will sustain and even as credibility the full arbitration process and that, of course, to me as a shareholder makes me even more convinced and committed to the point that the boat shares all along in the last three months and when the potential knowledge of insider information in few days if we make a transaction will stop me for a while to buy shares but then as soon as we will make an announcement I will continue to buy more shares to increase my stake in the company.

Speaker 1 06:52

Andrea Cattaneo, CEO and President of Zenith Energy. Thank you very much indeed.

Speaker 2 06:58

On the bed. Thank you.

Hello and welcome to Zach's Traders Cafe. I'm joined by Andrea Cataneo, who is CEO and President at Zenith Energy. How are you today, Andrea? Well, thank you. All right, you must be quite busy at the moment.

Unknown speaker 00:24

Recently, Zenith raised capital for a new acquisition, or perhaps there'll be several acquisitions. Can you tell us what you are acquiring? Yes, we are currently looking at making multiple acquisitions in the electricity production space.

Unknown speaker 00:39

This is an area, as you know, we know well. We have had over 10 years of success with our Italian operation. What is exciting about these new opportunities is that they are focused on producing electricity from sustainable sources, not fossil fuel.

Unknown speaker 00:56

That is a big shift for us and one that aligns with the global energy transition. Over time, we intend to scale up this acquisition significantly, especially once our arbitration processes conclude successfully.

Unknown speaker 01:14

But for now, we are focused on improving the concept. We want to give our investors confidence that when the arbitration funds are available, we will be ready to put them to work effectively. Importantly, we are concentrating our effort in Europe in a very safe and stable operating environment legally.

Unknown speaker 01:34

We have taken lessons from past experience, particularly in Tunisia, and we are making sure we avoid that kind of risk going forward. Some might ask, considering you're potentially on the verge of getting $500 or $600 million from arbitration or the arbitration process, why raise capital now?

Unknown speaker 01:55

Why not just wait for that money to arrive and then deploy it? That is a fair question. But it's important to remember that Zenit Energy is and has always been an energy protection company, not a litigation firm.

Unknown speaker 02:12

Our expertise lies in building and managing high-quality energy assets. When the Tunisian authorities seize our operation there, we lost assets generating already between 10 and 20 million in our profits.

Unknown speaker 02:30

Those need to be replaced, and that's what we are now beginning to do. Over the past two years, much of our time and energy has gone into preparing very strong arbitration cases, and the successes of our first case shows the preparation quality.

Unknown speaker 02:47

But now, with the gap between the conclusion of Arbitration 2 and the exit hearing in Washington, we are shifting our focus back to what we do best, acquiring strong revenue-generating assets at the right price.

Unknown speaker 03:02

Our Tunisian assets were incredibly profitable, and our Italian portfolio continued to generate significant value after being purchased for very little more than 12 years ago. Our goal now is to rebuild, to replace what was taken and continue to grow.

Unknown speaker 03:28

But to add that, forgive me, we have promised our shareholders the portion of the arbitration proceeds will be distributed. But we also want to show them how we intend to use the remaining funds to expand the company's long-term value.

Unknown speaker 03:41

We have a strong track record with acquisition, and we want shareholders to know they can expect attractive return, not only through distribution, but through increased asset value. So, as I was going to say, it's like business as usual, you're continuing with the business, but does this mean you're still confident in the arbitration outcome, even though you're pursuing your energy strategy?

Unknown speaker 04:08

Well, absolutely, yes. We are extremely confident in the outcome of the remaining two arbitrations. So there is the second and they exceed the last one in Washington. The second tier went very well, and we expect the third to follow the same path.

Unknown speaker 04:27

In fact, it is precisely because of that confidence that we are acquiring smaller assets now. We want to show our shareholders what our future looks like in action, in production. If we can deliver returns on a smaller scale today, they can have confidence that we will deliver even greater value when the full arbitration proceeds are available.

Unknown speaker 04:49

And I should add, I personally increase my own stake in the company during the latest placings. I want to hold as many shares as possible by the time the appreciation results are delivered. I also intend to continue buying shares on the open market whenever I'm permitted by the rules as a trading window.

Unknown speaker 05:11

I hope this sends a strong message to all investors. I believe deeply in the Zenith future and fully confident that their coming arbitrations, outcomes, will be successful for the company. Andrea Cataneo, CEO of Zenith Energy, thank you very much indeed.

Unknown speaker 05:28

Thank you, Zach.

Hello, and welcome to Zach's Traders Cafe. I'm joined by Andrey Catineo, who's CEO at Zenith Energy. How are you today, Andrey? Very well, thank you. Right. We've been speaking quite a lot in the recent past.

Unknown speaker 00:22

What's the latest we are sitting on the edge of our seats waiting for arbitration news? No, keep being seated in the edge of your seat because we have had the formal communication before the session and yesterday after the session of ICC2, which is the second administration with total claims for 130 million American dollars.

Unknown speaker 00:50

And the ICC protocol is extremely confidential. So there are reasons for which I cannot say anything about the detail is out once. But look at my face and look at the happiness that transpired from my looking at you and the fact that I keep extreme care not to upset anybody.

Unknown speaker 01:16

And then you will see that the thing is going toward the target that we spent all as shareholders. And the award is supposed to arrive within the end of summer, 2025. So this summer and then the shareholders should keep very much connected and in touch because there are in various front of the company plenty of news that are coming in the next few weeks.

Unknown speaker 01:55

So we have a situation where in the next few months we will get a presumably a significant result. Shares around seven or eight pens are up from one or two pens. I suppose that the market is currently sort of.

Unknown speaker 02:10

halfway up and halfway down in terms of waiting and trying to value your potential win? Yes, you know this is the attitude that shareholders should have to gauge what is our probabilities ourselves. We are very cautious especially in three arbitration procedures of which one remaining to be advocated in Washington they exceed which is our third case for 503 million of claims in this one and so we are concentrated in preparing now the third round and as you know there is a tremendous work of our team of lawyers which are excellent lawyers led by Professor Lays the most famous arbitrator of France And then we have busy,

Unknown speaker 03:12

busy, busy in this, which will produce results. Already, we prove that our team works. We have obtained already a very good result in ICC1, which is now an executory paper. And so we have a credit toward ETAB, the National Rail Company.

Unknown speaker 03:35

And that is already a very big result. Well, I said the market's factoring in what could happen, but it's all it's really done so far as it is actually only factored in ICC1, the first win near to $10 million.

Unknown speaker 03:48

And you've got a 20 million market cap, 20 million sterling market cap. But there's another potentially 600 million to go, which would be rather more than 70 a share. It might be 50 or 100 or whatever it is.

Unknown speaker 04:00

So are you surprised the market is sort of going for a wait and see approach rather than actually anticipating a potential win? You know, I'm philosophically there myself with my stake and my shares and not to the public.

Unknown speaker 04:15

I keep very happy in waiting for the final success. And so I I would suggest that to any friend that have a similar position to do. You know, the fact that is a process now unrolling and and unfolding properly and with three arrows in our bow.

Unknown speaker 04:44

So ICC1, ICC2 and X1. So I think that is a terrific thing. Plus, I I am working with my colleagues in some other new avenues that will bring success to ZENIT. So I am looking forward to be more eloquent in the next event with ZEC Cafe.

Unknown speaker 05:15

Well, I'm sure you're always going to be eloquent. But in the meantime, we look forward to further news. Andrea Cattaneo, CEO at ZF Energy. Thank you very much indeed. Thank you, ZEC.

Unknown speaker 00:04

Today, we're turning our spotlight on Senate Energy, a listed international energy production and development company for a business update. There are lots of processes going on with the company and there is a huge interest from shareholders and the market.

Unknown speaker 00:22

CEO and president is Mr. Andrea Cataneo and he is standing right beside me in the studio. Please welcome Andrea. Thank you. So, to start off, can you give us a brief presentation of the company and yourself?

Unknown speaker 00:37

Yes, we are a Canadian company. We had an old relation with Scandinavia. We started to visit Scandinavia for the business of energy in 2010 and soon after we acquainted with the Norwegian director, that was the director of our company for many years.

Unknown speaker 00:58

And then in 2018, we listed in the Oslo Wars, which was a very interesting process and is a process that entangled to be in acquainting with the local community, local financial community, local opinion of the investors, especially the retail investors and then we succeeded over the years because we discovered to have many thousand shareholders and then more recently we discovered to have some thousand shareholders in Sweden.

Unknown speaker 01:36

And so, hence, I had the desire to know more about Sweden and here we are. We are an energy company which has recently moved to green activity as we are doing mainly solar parks, so we are building a portfolio of 20 mega solar parks in the south of Europe.

Unknown speaker 01:59

It's very important to mention these aspects. the south of Europe there is even a website which is very interesting of the European Union which shows the solar irradiation of any point of the EU and you will see that from Norway to the south of Sicily the difference of irradiation is dramatic and so obviously solar is a business that is best fit for the south part but in Europe so with the legal protection of common systems and laws and as well rules and protections from being damaged by local authorities which is the history of Zenit indeed which has built a large oil and gas set of properties but all has been sequestrated in 2022 by the government of the Republic of Tunisia that prompt us to react initially with one arbitration and then with a second and then with a third and so we are now a company that has a strong element as well of arbitration claims.

Unknown speaker 03:16

Yeah and this business update will be evolving a lot around the arbitrage and arbitration and you have already won a partial ruling in the ICC process. How do you assess the risk of political interference or prolonged proceedings in the remaining parts of the cases?

Unknown speaker 03:38

Today we are always considering that we are in a period where we refer to the old times where there was more order and manners in the people. We shall say that the arbitration world is a very comforting space, is still effective functioning and seems beyond any sort of interference and as well prolonged proceedings as you mentioned because we started in 2022 of course an arbitration is not something that you can snap in a few days so a few months of preparation and then in October we filed the first one and then 2022 and then we had already the award of the first one which is called Inawa jargon ICC one in front of the International Chamber of Commerce of Paris which is the largest in number of arbitration in the world and so only two years and two months we have had the final award so has been great comfort the speed and not only the success and so we have had a sentence that has been 58 percent larger than the claim.

Unknown speaker 04:50

The second claim is 130 million dollars is called Inawa jargon ICC two has been been here in the court on the end of February of this year, and the results are expected in the summer of this year. So in a few weeks we start the countdown to the day in which we will have, which is unknown when the result.

Unknown speaker 05:20

And then we have the largest of our proceedings is a different type of arbitration, it's called treaty arbitration, so it's an arbitration made in Washington in an entity called EXID, which is an entity created by the World Bank many years ago to protect the investment of investing countries in receiving countries.

Unknown speaker 05:44

So this treaty has been made between the country receiving the investors and the country. being the nationality of the investing company to protect this money and so as in our case this treaty applies to the fact that all our investment has been wiped out for and theories.

Unknown speaker 06:05

Okay and so if we look at the timeline here the ICC 2 is due to summer of 25 maybe and for the ICSID arbitration what is the timeline there? So they exceed as an end with an award which is on the second or third quarter of 2026.

Unknown speaker 06:31

You know it's a massive arbitration is five hundred three million dollars at the moment we are still making the final filings which will possibly change, increase the amount of our claims possibly and then time must pass and so there are additional costs to record and so as you can see is a very limited amount of time because from the year 2023 in which we filed the ICSID arbitration as a start the autumn of 2026 will be only two years and few months.

Unknown speaker 07:20

Okay I read an analysis by analyst group where they presented the probability adjusted compensation that they estimate at 143.7 million US dollar. What is your view on this estimate? Well first of all you know the more conservative a research house is the more credible in the world of finance it is as well.

Unknown speaker 07:51

We have to put the $143 million that you mentioned in perspective of the total claims which are partly already worn, partly to be worn still, totaling $642 million, $0.7 million. So then, as you can see, is nearly a fifth of the amount of the total claim.

Unknown speaker 08:15

But there are very complex calculations that somebody can enjoy reading the research, very professionally made, and of course in the safety of the target price of the stock, which is already $7 per share after the end of the true arbitration, which is comparing the to the 1.90 of today in Oslo is still a big multiple.

Unknown speaker 08:48

So to be conservative is by us welcome. Okay. We have a different, of course, view. And of course, we are in for the full claim and we are confident that maybe as it happens, I remind you in the case of ICC1, where we had an increase in respect to the claims of 58%, there will be an important increase as well in the sentence for the 642.

Unknown speaker 09:16

So yeah, it's gonna be very exciting to follow this process. And have you begun internal or external discussions regarding the use of potential proceeds like dividends, share buybacks or other reinvestments?

Unknown speaker 09:32

Despite the fact that our number of shareholders worldwide is reaching nearly 10,000, we are listed in the main market of the London Stock Exchange and we are listed in the Oslo now called Aeronext. But as well we have because of neighboring between the

investment society of Norway and Sweden, a lot of shareholders in Sweden already in excess of 5,000 individuals.

Unknown speaker 10:02

So we are very much linked to each of our shareholders. Our shareholders are staffed massively after the sequestration of our asset in Tunisia, which put a question mark about the ability to react because to make, not to say three, but only one arbitration is a great challenge that sometimes a company cannot afford to make it, the find of the good lawyer, the cost, or the financing of this operation.

Unknown speaker 10:39

Our sales instead. we have not made recourse to litigation finance which is very expensive and we have Estella team in Paris the litigation are in French language so the best place to have the lawyers is Paris and we have the most famous arbitration professional of France which is called professor Thomas Glace which is considered an authority and then we have a large firm making the cooperation with him so all of that bring to say that we are very proud but at the same time we have a duty to deliver this important result to the show that they suffer before so ourselves we believe that there will be an important outcome and we are working a hundred percent on this direction okay and how does the favorable ICC ruling already secured to influence your position in potential settlement negotiations?

Unknown speaker 11:49

Settlement is always welcome because peace and not litigation is always welcome by Zenith being an industrial company, not a litigation company. At the same time, negotiation for settlement are best made out of a position of force.

Unknown speaker 12:07

So I think that we can speak about settlement after the result of ICC2. Okay, sounds reasonable. Can you elaborate on your growth strategy and what you focus on to create long-term shareholder value?

Unknown speaker 12:25

Since 2010, Zenith has been a producer of energy with a turnover and has not been, for example, an exploration company, so a speculative company trying to make something and to make a great result, but possibly losing everything.

Unknown speaker 12:43

So we have instead been a steady producer. The litigation reduces very much this sequestration, and then the litigation reduces very much this element of our soul, which is industrial. So now we are regaining the industrial element with the new campaign, which is the creation of a portfolio of 20 megas of solar park in the south of Europe.

Unknown speaker 13:10

Okay, and where would you say you see Zenith energy in one year from now? Well, first of all, we should deliver more possibly than the 20 megaporfolio, so showing to our investors that we are able to deliver what we have aimed to.

Unknown speaker 13:30

To put a 20-megand perspective, I was speaking the other day with the representative of a large multinational, which is one of the biggest. in one of the European countries, and they have a portfolio of 120 mega, so then if something so important as create a portfolio of 120 mega, we can be very proud to make 20 mega in one year as portfolio of Zenith.

Unknown speaker 13:58

So that will be the industrial part. We are very opportunistic, there can be other companies that in lack of financing or in lack of confidence, they may throw the towel, which has been our expertise.

Unknown speaker 14:13

We started to produce gas in Italy because somebody sold the entire portfolio in one month to us, and we are ready to take it up. So the opportunistic attitude is always a great element of our life, and then there will be the result hopefully of the second and maybe the third arbitration, and so we will be counting the dollars.

Unknown speaker 14:38

Thank you. And could you list your three most important reasons why Senate Energy is a really good investment today? Yes, the first thing is the legal momentum. By total destiny, with us making the speedy effort to file the arbitration as soon as possible, we have a cadence of result of arbitration.

Unknown speaker 15:02

We have had in Christmas the 10 million victory in ICC1, and then before the end of the summer, in July most probably, we will have the result of ICC2, which already is a sizable multiple of the ICC1, 10 million versus 130.

Unknown speaker 15:24

And then in one year, maximum later, we will have the result of the third arbitration, which is a further five-time multiple, $503 million before review. So that makes a very interesting momentum, legal and as well monetary-wise, somebody can invest and see the investment profiting more and more progressively with the result of number two and number three of the arbitration.

Unknown speaker 15:55

The second point is that all that is possible. Well, somebody should make his own assessment, but the point that the most famous legal team of France is backing us, and we have won already the first one, which is very similar in legal team because the sequestration has been the same to the second, to the third, should be comfort that this legal team and this legal case will win.

Unknown speaker 16:21

And the third is that there is justice. Our shareholders have been unduly damaged by this sequestration, and arbitration is a functioning system, and we are seeking justice. It seems that we are getting justice, and we look forward to have all the justice delivered to our shareholders.

Unknown speaker 16:41

Really interesting to have you joining us in the studio. Mr. Andrea Cattaneo, please thank you so much for joining us. Thank you very much to you.

Today we're turning our spotlight on Senet Energy, a listed international energy production and development company for a business update. There are lots of processes going on with the company and there is a huge interest from shareholders and the market.

Unknown speaker 00:22

CEO and president is Mr. Andrea Cataneo and he is standing right beside me in the studio. Please welcome Andrea. Thank you. So to start off, can you give us a brief presentation of the company and yourself?

Unknown speaker 00:37

Yes, we are a Canadian company. We had an old relation with Scandinavia. We started to visit Scandinavia for the business of energy in 2010. And soon after we acquainted with the Norwegian director that was director of our company for many years.

Unknown speaker 00:59

And then in 2018 we listed in the Oslo Bors, which was a very interesting process and is a process that entangled to be in acquainting with the local community, local financial community, local opinion of the investors, especially the retail investors.

Unknown speaker 01:24

And then we succeed over the years because we discover to have many thousand shareholders. And then more recently we discover to have some thousand shareholders in Sweden. And so hence I had the desire to know more about Sweden.

Unknown speaker 01:42

And here we are. We are an energy company which has recently moved to green activity as we are doing mainly solar parks. So we are building a portfolio of 20 mega solar parks in the south of Europe. It's very important to mention this aspect, the south of Europe.

Unknown speaker 02:06

There is even a website which is very interesting of the European Union which shows the solar irradiation of any point of the EU and you will see that from Norway to the south of Sicily the difference of irradiation is dramatic.

Unknown speaker 02:22

And so obviously solar is a business that is best fit for the south part. But in Europe, so with the legal protection of common systems and laws and as well rules and protections from being damaged by local authorities, which is the history of Zenit indeed, which has built a large oil and gas set of properties, but all has been sequestrated in 2022 by the government of the Republic of Tunisia.

Unknown speaker 02:59

That prompt us to react initially with one arbitration and then with a second and then with a third. And so we are now a company that has a strong element as well of arbitration claims. Yeah, and this business update will be evolving a lot around the arbitrage and arbitration.

Unknown speaker 03:23

You have already won a partial ruling in the ICC process. How do you assess the risk of political interference or prolonged proceedings in the remaining parts of the cases? Today we are always considering that we are in a period where we refer to the old times where there was more order and manners in the people.

Unknown speaker 03:51

We shall say that the arbitration world is a very comforting space, is still effective, functioning, and seems beyond any sort of interference and as well prolong proceedings as you mentioned because we started in 2022.

Unknown speaker 04:10

Of course, an arbitration is not something that you can snap in a few days, so few months of preparation, and then in October we filed the first one. And then 2022, and then we had already the award of the first one, which is called in our jargon ICC1, in front of the International Chamber of Commerce of Paris, which is the largest in number of arbitration in the world.

Unknown speaker 04:36

And so only two years and two months we have had the final award. So has been great comfort, the speed, not only the success. And so we have had a sentence that has been 58% larger than the claim. The second claim is $130 million, is called in our jargon ICC2, has been heard in the court on the end of February of this year and the results are expected in the summer of this year.

Unknown speaker 05:10

So in a few weeks we start the countdown to the day in which we will have, which is unknown when, the result. And then we have the largest of our proceedings is a different type of arbitration, is called treaty arbitration.

Unknown speaker 05:30

So it's an arbitration made in Washington in an entity called ICSID, which is an entity created by the World Bank many years ago to protect the investment of investing countries in receiving countries.

Unknown speaker 05:45

So this treaty has been made between the country receiving the investors and the country being the nationality of the investing company to protect this money. And so, as in our case, this treaty applies to the fact that all our investment has been wiped out for undue reason.

Unknown speaker 06:06

Okay, and so if we look at the timeline here, the ICC2 is due to summer, 25th, 25th. July, maybe? Exactly. And for the ICSID arbitration, what is the timeline there? So they exceed as end with an award which is on the second or third quarter of 2026.

Unknown speaker 06:32

You know, it's a massive arbitration, it's $503 million. At the moment, we are still making the final filings, which will possibly change, increase the amount of our claims, possibly. And then time must pass, and so there are additional costs to record.

Unknown speaker 07:00

And so, as you can see, is a very limited amount of time because from the year 2023, in which we filed the exceed arbitration as a start, the autumn of 2026 will be only two years and few months. I read an analysis by Analyst Group where they presented the probability-adjusted compensation that they estimate at 143.7 million US dollar.

Unknown speaker 07:35

What is your view on this estimate? Well, first of all, you know, the more conservative a research house is, the more credible in the world of finance it is as well. We have to put the $143 million that you mentioned in perspective of the total claims, which are partly already worn, partly to be worn still, totaling $642 million.7 million dollars.

Unknown speaker 08:09

So then, as you can see, is nearly a fifth of the amount of the total claim. But there are very complex calculations that somebody can enjoy reading the research, very professionally made. And of course, in the safety of the target price of the stock, which is already seven SEC per share after the end of the triarbitration, which is comparing to the 1.90 of today in Oslo, is still a big multiple.

Unknown speaker 08:48

So to be conservative is by us welcome. Okay. We have a different, of course, view. And of course, we are in for the full claim. And we are confident that maybe, as it happens, I remind you in the case of ICC1, where we had an increase in respect of the claims of 58%, there will be an important increase as well in the sentence for the 642.

Unknown speaker 09:17

So it's going to be very exciting to follow this process. And have you begun internal or external discussions regarding the use of potential proceeds like dividends, share buybacks or other reinvestments?

Unknown speaker 09:33

Despite the fact that our number of shareholders worldwide is reaching nearly 10,000, we are listed in the main market of the London Stock Exchange and we are listed in the Oslo now called Aeronext. But as well we have, because of neighboring between the investment society of Norway and Sweden, a lot of shareholders in Sweden already, in excess of 5,000 individuals.

Unknown speaker 10:04

So we are very much linked to each of our shareholders. Our shareholders suffered massively after the sequestration of our asset in Tunisia, which put a question mark about the ability to react, because to make, not to say three, but only one arbitration is a great challenge.

Unknown speaker 10:30

Sometimes a company cannot afford to make it, the find of the good lawyer, the cost or the financing of this operation. Ourselves, instead, we have not made recourse to litigation finance, which is very expensive.

Unknown speaker 10:47

And we have a stellar team in Paris. The litigation are in French language, so the best place to have the lawyers is Paris. And we have the most famous arbitration professional of France, which is called Professor Thomas Clays, which is considered an authority.

Unknown speaker 11:07

And then we have a large firm making the cooperation with him. So all of that brings to say that we are very proud, but at the same time, we have a duty to deliver this important result to the shareholders that they suffered before.

Unknown speaker 11:26

So ourselves, we believe that there will be an important outcome, and we are working 100% on this direction. Okay. And how does the favorable ICC ruling already secured influence your position in potential settlement negotiations?

Unknown speaker 11:49

Settlement is always welcome because peace and not litigation is always welcome by Zenit being an industrial company and not a litigation company. At the same time, negotiations for settlement are best made out of a position of force.

Unknown speaker 12:08

So I think that we can speak about settlement after the result of ICC2. Okay, sounds reasonable. Can you elaborate on your growth strategy and what you focus on to create long-term shareholder value?

Unknown speaker 12:25

Since 2010, Zenit has been a producer of energy with a turnover and has not been, for example, an exploration company, so a speculative company trying to make something and to make a great result, but possibly losing everything.

Unknown speaker 12:44

So we have instead been a steady producer. The litigation reduce very much this, the sequestration, and then the litigation reduce very much this element of our soul, which is industrial. So now we are regaining the industrial element with the new campaign, which is the creation of a portfolio of 20 mega of solar park in the south of Europe.

Unknown speaker 13:10

Okay, and where would you say you see Senate energy in one year from now? Well, first of all, we should deliver more, possibly, than the 20 mega portfolio. So showing to our investors that we are able to deliver what we have aimed through.

Unknown speaker 13:31

To put a 20 mega in perspective, I was speaking the other day with the representative of a large multinational, which is one of the biggest in one of the European countries, and they have a portfolio of 120 mega.

Unknown speaker 13:46

So then if something so important as create a portfolio of 120 mega, we can be very proud to make 20 mega in one year as portfolio of Zenit. So that will be the industrial part. We are very opportunistic.

Unknown speaker 14:02

There can be other companies that in lack of financing or in lack of confidence, they may throw the towel, which has been our expertise. We started to produce gas in Italy because somebody sold the entire portfolio in one month to us and we are ready to take it up.

Unknown speaker 14:23

So the opportunistic attitude is always a great element of our life. And then there will be the results, hopefully, of the second and maybe the third arbitration. And so we will be counting the dollars.

Unknown speaker 14:38

Okay, thank you. And could you list your three most important reasons why Senate Energy is a really good investment today? Yes, the first thing is the legal momentum. By total destiny, with us making the speedy effort to file the arbitration as soon as possible, we have a cadence of result of arbitration.

Unknown speaker 15:03

We have had in Christmas the 10 million victory in ICC1, and then before the end of the summer, in July most probably, we will have the result of ICC2, which already is a sizable multiple of the ICC1, 10 million versus 130.

Unknown speaker 15:26

And then in one year maximum later, we will have the result of the third arbitration, which is a further five times multiple $503 million before review. So that makes a very interesting momentum legal and as well monetary-wise.

Unknown speaker 15:46

Somebody can invest and see their investment profiting more and more progressively with the result of number two and number three of the arbitration. The second point is that all that, it is possible, well, somebody should make his own assessment, but the point that the most famous legal team of France is backing us, and we have won already the first one, which is very similar in legal team, because the sequestration has been the same to the second and to the third,

Unknown speaker 16:17

should comfort that this legal team and this legal case will win. And the third is that there is justice. Our shareholders have been unduly damaged by this sequestration and arbitration is a functioning system and we are seeking justice.

Unknown speaker 16:35

It seems that we are getting justice and we look forward to have all the justice delivered to our shareholders. Really interesting to have you joining us in the studio. Mr. Andrea Cataneo, please thank you so much for joining us.

Unknown speaker 16:50

Thank you very much to you.

Speaker 1 00:00

Welcome to Zach's Traders Cafe, today I'm joined by Andrea Cattineo, who is CEO of Zenith Energy. How is your day Andrea? Not bad.

Speaker 2 00:07

Thank you.

Speaker 1 00:08

We haven't spoken for a couple of months since I'm sure many in the market, many shareholders are wondering what's going on. Could you give us a bit of info?

Speaker 2 00:15

Yes, you know, the basic info is that we are working 24-7 in this big battle of the three habituations, because let's remember that the first habituation is finished as an award, but now there is the activity of enforcement. And then the second habituation has been heard on the 26th of February 2025, and we are waiting the sentence. And then the big work at the moment is in preparing the third habituation, the one in Washington, they exceed. So there is an enormous amount of work for the next months and months. But in the middle of this commitment, we are as well very much active in creating a new industrial portfolio of Zenit, which substitute the one that has been in part robbed by the Tunisians and so that has caused the damages and then as a consequence, the claims. So we want to have a robust activity to be, as we have been always, an energy producer.

Speaker 1 01:30

And so let's say this time next year, everything is finished, all the arbitration is done, all the claims are done and enforcement is done. What will Zenith Energy look like at that time?

Speaker 2 01:41

Well, you know, it will be either a very cash-rich company or nevertheless already a very asset-rich company because, as you know, the award forms an executory paper, so a receivable, an asset in the portfolio and the balance sheet of a PLC.

Speaker 1 02:04

And the recent news has been regarding, I suppose on the renewable side, are you focusing on that more than anything else?

Speaker 2 02:12

Yes, we are definitely selecting as the priority and the nearly unique focus of our acquisition, the solar activity, to start with, in the field of renewable. The reason are the values. The first is that in the oil and gas sector, the assets lie in remote countries. And these remote countries may as well present an accident like the one we suffered in Tunisia, when instead the renewables are in many countries, but many of them as well. They are countries with the respect of law, countries that are part of the European Union or of other stable jurisdictions. And so then we want to buy assets in a solid legal ground. The second advantage of the renewable is that the negotiations with the government are a total different type. There is, of course, an environmental protection law. There are approval, but it's just a question of being able to make a project and not a complicated governmental negotiation with things that are very remote, like exploration or even production, with a lot of investment for a number of years in a very unstable world, with a lot of wars going around and a lot of problems about the transportation of oil. For example, the present war may delay the use of the main channel between Europe and Asia, Suez and Dormuz. And so all these complications should not, in my opinion, appeal to investors, when instead the production of electrical energy is something that is clearly in demand everywhere, is clearly with the empathy of everybody. And what is more important, everybody desire, like possibly this summer in the UK, to make electricity out of renewable rather than gas.

Speaker 1 04:23

Is it also the case that there are some investors who don't like fossil fuels, but they do like renewable energy? And so you'll have both parts of that sort of ideal cupboard. So the people like fossil fuels, they're like you, other people like renewable, they're like you too. So you're sort of hedged in terms of market perception.

Speaker 2 04:41

You are absolutely right. I think with the empathy of the fact that we have been damaged and sequestrated, so we have victims and there is an empathy for the victim, especially if the victim can get back 600 million American dollars. And then as well, the empathy that we are producing clean energy from solar origin. This proves the result of our stock price, which shows the confidence and the empathy that the investors have for us.

Speaker 1 05:13

and in terms of the solar, how much interest is there from governments and other bodies in terms of getting those projects over the line.

Speaker 2 05:22

Well, you know, as well, all the times when we speak about energy is a very contradictory environment, very complicated and with different ideas in different countries, but the country that we have selected to start with where we are already producing electricity, so having a knowledge and understanding of the mechanism of sending electricity, which is much more complicated than solenoid, is Italy. And so in Italy, there is a favorable system toward solar for tall tyke is called down there. And then we should say that with all the complication that any bureaucracy offer, we are able to plan to reach the 20 mega that is our target portfolio for 2025 in advance in respect of the end of the year. So that sensation that we have, that we are in progress to reach this target in advance of the end of the year is very important. A, demonstrated zenith industrial ability to learn and adapt from oil and gas, which is a total different technology, to electricity, thanks to our little experience in Italy for 10 years. And second, the fact that we are, as we always been, quite the active negotiator and we are able to buy things at appropriate prices, building a sizable portfolio, 20 mega is already a portfolio that is respected even by medium company in the sector. We are a total newcomer. And the fact that we are arriving to this 20 mega before the end of the year is another important point to raise to the attention of our shareholders.

Speaker 1 07:07

Does it help that you might have greater local knowledge about Italy than others?

Speaker 2 07:11

Well, you know, I have lived most of my time of my life outside Italy. But certainly I am Italian and I know Italy and I understand the difference between various parts of Italy, which are confirmed as well by nature. The irradiation, solar irradiation of boson north of Venice is 40 percent less than the solar irradiation in Sicily, which is quite dramatic statistics that not everybody would have thought of. So it is a very diverse country in solar irradiation in the behavior of locals and we are very pleased to have a widespread portfolio.

Speaker 1 07:54

And finally, I mean, we are, you know, you mentioned the arbitration at the moment, you've got three situations going on there in different stages, there might be some observers of your company just to say, well, you can do all your solar energy and your renewables, but actually, when are we going to see the money for Tunisia?

Speaker 2 08:14

Well, you see, the money from Tunisia is coming in bit and pieces or at once. It's still unclear if we will make a settlement or not is in the mind of God. But we should say that we should be enthusiastic about the money that we will get, which I remind to everybody is not a lottery. It's just a fact that we have been robbed and there are mechanisms in international justice, the arbitration, which permit to recover sometimes more than what we have been hit and wed because, you know, in the meantime, five years have passed. So the joy and the struggle that we have gone through, family that have been destroyed by the action of Tunisian. Let's remember that we had many employees and many managers in excess. So when under 50, all these people have been disbanded, they lost their job. They have a stigma because they are a friend of Zenith. So all these things have a price that we hope the justice of arbitration will compensate. But at the same time, the solar activity is very profitable. Just to give you an idea, each of these 20 mega, when is in production. So after the completion of the year and the completion of the work, because we are both everything in early development or in semi development, nothing ready just in production, because it would be a waste of profitability just to buy something, the ready-made product, will produce one million mega or more per annum, one million dollar or more per annum. So that compares that we will have then 20 million of gross income. Then we have to have the expense in the diet, which are normally minor in solar activity and will be contained by us with our knowledge of how to monitor local behavior with people like gardeners and maintenance not taking at all on

us. But this is per annum. So we are speaking about making a bit of money by our new division. Of course, the attraction for the investors will remain the big part of 642 million that we are supposed to receive from our three arbitration.

Speaker 1 10:40

But let's say even on its own, the solar part, you think that would be a substantial business and you're not sort of just, you don't have all your money on red or black, you do actually have a sort of a rounded company.

Speaker 2 10:53

A company similar to us, which of course I will not name listed in Scandinavia, has reached a market cap of $200 million, making a series of acquisitions. Then something went wrong, the company has not been anymore the same market cap, but only in what we are doing is possible to reach the market cap we have today without arbitration. Then we have as well the income coming from the arbitration, which will be a work for the next two, three years, but the two things go in parallel. In a way we have two pillars of the attraction of Zen stock.

Speaker 1 11:37

And would you go harder into the solo when the money arrives from Tunisia?

Speaker 2 11:42

Yes, we should not, I can say, discourage some investor thing that we will gain the money and then we will lose it in some investment, which is something that happens in life when somebody make a great success, then become more lenient and less alert and then lose what he has gained. So we will be very careful. And as you know, we are strongly intended to make a distribution of some money to our investors that accompanied us as a whole for the last 10 years in this journey in oil and gas and now arbitration and renewable. But certainly now we have a business that is very intense, electricity. Electricity shows today enormous contradiction, the fact that the renewables are a great plus but as well a threat to the flow of electricity. The grid don't know so well how to deal with the new multicenter production of electricity. The case of Spain and Portugal is a proof, the big accident of two months ago is a proof of this requirement of new technology. There is the arrival of batteries to have electricity made in cheap hours of the day when there is the sun shining, then to be sold at a much higher price in the

evening. That is a very interesting word to understand, learn and to make money out of it.

Speaker 1 13:12

Well, we look forward to learning more. In the meantime, Andrea Cataneo, CEO at Zenith Energy. Thank you very much indeed. Thank you.

2025-06-18 Andrea BRR Interview

Zenith Energy - Arbitration update | Broadcast | BRR Media

Transcript

Unknown speaker 00:03

We're here today to discuss Zenith Energy, and of course the most pressing topic is the ongoing arbitration cases against the Republic of Tunisia, which now total a combined value of $642 million. Zenith already secured a $10 million award in the first arbitration case back in December 2024, and the outcome of the second case, valued at $130 million, is expected later this summer.

Unknown speaker 00:30

Andrea, how confident are you in the result of this second arbitration? I'm very confident, indeed, in the result of ICC2. The case of ICC2 is very similar as legal base to ICC1, for which I remind investors we have received a sentence that is 45% above the value of your regional claim.

Unknown speaker 00:51

So I think that it is very possible that we receive full satisfaction of our demands, which are based in something that legally has been already proven right. And can you share any details with us about the third arbitration currently underway?

Unknown speaker 01:09

The third arbitration is much bigger, it's four times bigger than ICC2, and it's of total different type. ICC1 and ICC2 are contractual arbitration, brought in front of the International Chamber of Commerce of Paris, which is the center receiving the biggest number of arbitration in the world, Peranum, but they exceed this very important because they represent another type of arbitration, which is an arbitration protecting the investors from investing countries that they've gone to emerging countries,

Unknown speaker 01:46

and they have been sheltered by the treaty that has been signed by certain countries, for example, in our case, United Kingdom, in the past, and so a long time ago, and so that treaty protects when you have not.

Unknown speaker 02:03

made the investment and you are deprived, sequestrated, and the damage in your investment in the country that does co-sign this treaty, which is in this case Tunisia. So indeed, we have lost, because of sequestration, the licenses of two important fields.

Unknown speaker 02:24

We have lost, because I've been taking away the oil and storage in the national port. We have lost the money of the invoices, because they have never been paid for the last seven years. We have lost the goodwill, because we had this advanced stage, in which four fields were producing, which we have conquered an ongoing business that was credible and respectable, given to Zenith, a juridical persona,

Unknown speaker 02:54

to be a strong oil producer in a well-developed country like Tunisia. All this has been destroyed by the act of the two ancient government and that this treaty protects us and compensates us for these damages.

Unknown speaker 03:14

Andrea you certainly have a lot of legal proceedings underway and it sounds like Zenith could be receiving a substantial sum in the near future. How do you plan on putting this capital to use? Set the morning I wake up and I think to be the managing partner of a firm because the majority of my email comes from lawyers, from experts, from quantum experts, from advisors, not from oil and electricity engineers.

Unknown speaker 03:41

But in reality we are an energy company. We want to remain on that way and to rebuild the portfolio that we have had once before being sequestrated by Tunisia. So we have used the goodwill of our Italian electricity production to focus in this sector, which is the renewable production of electricity in southern Europe.

Unknown speaker 04:06

And money as claims will come and with this money we will certainly think first to our good shareholders that have supported us in the better, in the good days. But a lot of money should remain available for investing in the industrial aspect of the company, which would be at the moment primarily the renewable sector.

Unknown speaker 04:32

So tell us more about the sorts of assets that Zenith is looking to acquire with the proceeds from these arbitration cases. At the moment we are focusing in the sector of production of electricity in Italy, but from renewable.

Unknown speaker 04:46

So it's what we call in London solar parks and instead in Italy we call it more photovoltaic. So we have already made three acquisitions, which have been announced to the public. which one already in production and the other in development and we are progressing very rapidly and so we believe that our initially announced target of 20 meg of capacity by Christmas 2025 will be reached before Christmas.

Unknown speaker 05:21

So shifting from oil to solar seems like quite a significant pivot for Zenith. Tell us why have you chosen to make this move now? Well you know it is very much in a trend of today market. You know that oil and gas has a lot of obstacles, a lot of enemies, a lot of difficulties in managing as well the financial aspect of it.

Unknown speaker 05:47

All things that we learn to overcome in the long years of continuity and fidelity to oil and gas, although renewable were already in fashion 10-15 years ago. But now we have this possibility to use our experience in electricity in Italy to make a renewable in Italy, a favorable market in a favorable moment.

Unknown speaker 06:13

And as well, we have to keep new shareholders loyal to us as we are expanding our shareholders base tremendously. And most of them, they are people that have agreementality. So the renewable choice is very appropriate.

Unknown speaker 06:31

This does an inhibitors from taking with the know-how and the team that we are still in the firm and the drilling rig that we still own to take an oil asset and develop it if the opportunity comes, but should be a perfect opportunity.

Unknown speaker 06:48

We will not make a campaign of acquisition in this sector anymore. In the renewable, now we are doing a campaign that is successful and this is the main focus. Well, Andrea, it sounds like a really compelling strategy.

Unknown speaker 07:04

Can you tell us more about where you see Zenith at the end of this year and moving into 2026? We are very busy indeed. At the moment, we are waiting in the next two months the sentence of the ICC2, which has an important value of $130 million and for which we are very confident.

Unknown speaker 07:26

Then when we have added then two sentences, we will stress enforcement, enhance enforcement activities, which will target Tunisian asset having now a sizable amount of money to recover. Despite that, we will still remain open to negotiation.

Unknown speaker 07:50

We are always very peaceful and we want to settle rather than make war and battles, but we wait for the right proposal. proposal and the right move from the defendant, not from us. And then four, we are still concentrating a large part of the day in fine-tuning the preparation for the yearning, which will be next year, of Exceed One in Washington.

Unknown speaker 08:19

On the operational side, instead, we have already started a campaign of acquisition with the three assets already, one in production in our hands. We believe to make such type of acquisition to have, by the end of the year, five mega in production with the rest in development.

Unknown speaker 08:41

And we believe that we will be able to conquer more assets in development during the year above the initial target of 20 mega. And then, furthermore, we are looking with the ingress of additional capital.

Unknown speaker 08:59

and the growing credibility in the sector to be able to look as well to other activities within the renewable, which is the storage of electricity. As you know, electricity by aeolic or by solar is made sometime in part of the day which are not the peak consumption.

Unknown speaker 09:20

So a great technique is to produce in the low price part of the day, but instead of selling it concurrently to store it and sell it in peak part of the day with higher prices. So as you can see, we have a very comprehensive plan, the encasement of the arbitration, the development of new asset and the new technologies within the renewable production of electricity.

Unknown speaker 09:54

So I believe the shareholders can be very thrilled by the development of our company and of our stock. Andrea, thank you. Welcome.

Unknown speaker 00:10

Hello and welcome to Zach's Traders Cafe. Today I'm joined by Andrea Cataneo, who is CEO of Zenith Energy. How are you today, Andrea? Not bad, thank you. We haven't spoken for a couple of months since I'm sure many in the market, many shareholders are wondering what's going on.

Unknown speaker 00:23

Could you give us a bit of info? Yes, you know, the basic info is that we are working 24-7 in this big battle of the three arbitrations. Because let's remember that the first arbitration is finished as an award, but now there is the activity of enforcement.

Unknown speaker 00:44

And then the second arbitration has been heard on the 26th of February 2025. And we are waiting the sentence. And then the big work at the moment is in preparing the third arbitration, the one in Washington, the exceed.

Unknown speaker 01:01

So there is an enormous amount of work for the next months and months. But in the middle of this commitment, we are as well very much active in creating a new industrial portfolio of Zenit, which substitutes the one that has been in part robbed by the Tunisians, and so that has caused the damages and then as a consequence the claims.

Unknown speaker 01:32

So we want to have a robust activity to be, as we have been always, an energy producer. And so let's say this time next year everything is finished, all the arbitration is done, all the claims are done and enforcement is done.

Unknown speaker 01:48

What will Zenith Energy look like at that time? Well, you know, it will be either a very cash-rich company or nevertheless already a very asset rich company because, as you know, the award forms an executory paper, so a receivable, an asset in the portfolio and the balance sheet of a PLC.

Unknown speaker 02:14

And the recent news has been regarding, I suppose, on the renewable side, are you focusing on that more than anything else? Yes, we are definitely selecting as the priority and nearly unique focus of our acquisition, the solar activity to start with in the field of renewable.

Unknown speaker 02:36

The reasons are various. The first is that in the oil and gas sector, the assets lie in remote countries. And these remote countries may as well present accidents like the one we suffered in Tunisia.

Unknown speaker 02:55

When instead the renewable are in many countries, but many of them as well, they are countries with the respect of law, countries that are part of the European Union or of other stable jurisdiction. And so then we want to buy assets in a solid legal ground.

Unknown speaker 03:16

The second advantage of the renewable is that the negotiations with the government are of totally different type. There is of course an environmental protection law, there are approvals, but it's just a question of being able to make a project and not a complicated governmental negotiation with things that are very remote, like exploration or even production, with a lot of investment for a number of years in a very unstable world with a lot of wars going around and a lot of problems about the transportation of oil.

Unknown speaker 03:56

For example, the present war may delay the use of the main channel between Europe and Asia, suets and dormutes. And so all these complications should not, in my opinion, appeal to investors. Instead, the production of electrical energy is something that is clearly in demand everywhere, is clearly with the empathy of everybody, and what is more important, everybody desire, like possibly this summer in UK,

Unknown speaker 04:28

to make electricity out of renewable rather than gas. Is it also the case that there are some investors who don't like fossil fuels but they do like renewable energy and so you'll have both parts of that sort of ideal covered.

Unknown speaker 04:44

So the people who like fossil fuels, they'll like you and the people who like renewable, they'll like you too. So you're sort of hedged in terms of market perception. You are absolutely right. I think with the empathy of the fact that we have been damaged and sequestrated, so we are victims and there is an empathy for the victim, especially if the victim can get back 600 million American dollars.

Unknown speaker 05:06

And then as well the empathy that we are producing clean energy from solar origin, this proves the result of our stock price, which shows the confidence and the empathy that the investors have for us.

Unknown speaker 05:24

And in terms of the solar, how much interest is there from governments and other bodies in terms of getting those projects over the line? Well, you know, as well, all the times when we speak about energy, it's a very contradictory environment, very complicated and with different ideas in different countries.

Unknown speaker 05:44

But the country that we have selected to start with, where we are already producing electricity, so having a knowledge and understanding of the mechanism of selling electricity, which is much more complicated than selling oil, is Italy.

Unknown speaker 05:59

And so in Italy there is a favorable system toward solar, photovoltaic is called down there. And then we should say that with all the complications that any bureaucracy offer, we are able to plan to reach the 20 mega, that is our target portfolio for 2025, in advance in respect of the end of the year.

Unknown speaker 06:23

So that sensation that we have, that we are in progress to reach this target in advance of the end of the year, is very important. A, demonstrate Zenit industrial ability to learn and adapt from oil and gas, which is a total different technology, to electricity, thanks to our little experience in Italy for 10 years.

Unknown speaker 06:46

And second, the fact that we are, as we always been, quite active negotiators and we are able to buy things at appropriate prices, building a sizable portfolio. 20 mega is already a portfolio that is respected even by medium company in the sector.

Unknown speaker 07:05

We are a total newcomer. And the fact that we are arriving to this 20 mega before the end of the year is another important point to raise to the attention of our shareholders. Does it help that you might have greater local knowledge about Italy than others?

Unknown speaker 07:22

Well, you know, I have lived most of my time of my life outside Italy, but certainly I am Italian and I know Italy and I understand the difference between various parts of Italy, which are confirmed as well by nature.

Unknown speaker 07:36

The solar irradiation of Bosn north of Venice is 40% less than the solar irradiation in Sicily, which is quite dramatic statistics that not everybody would have thought of. So it's a very diverse country in solar irradiation, in the behavior of locals, and we are very pleased to have a widespread portfolio.

Unknown speaker 08:04

And finally, I mean, we are, you know, you mentioned the arbitration at the moment. You've got three situations going on there in different stages. There might be some observers of your company who just sort of say, well, you can do all your solar energy and your renewables, but actually, when are we going to see the money for Tunisia?

Unknown speaker 08:25

Well, you see, the money from Tunisia is coming in bits and pieces or at once. It's still unclear if we will make a settlement or not is in the mind of God. But we should say that we should be enthusiastic about the money that we will get, which I remind everybody is not a lottery, it's just the fact that we have been robbed and there are mechanisms in international justice, the arbitration, which permit to recover sometimes more than what we have been hit with because,

Unknown speaker 09:01

you know, in the meantime, five years have passed. So the joy and the struggle that we have gone through, family that have been destroyed by the action of Tunisian. Let's remember that we had many employees and many managers in excess of 150.

Unknown speaker 09:20

All these people have been disbanded, they lost their job, they have a stigma because they are a friend of Zenith. So all these things have a price that we hope the justice of arbitration will compensate.

Unknown speaker 09:34

But at the same time, the solar activity is very profitable. Just to give you an idea, each of these 20 mega when is in production, so after the completion of the year and the completion of the work, because we have bought everything in early development or in

semi-development, nothing ready just in production because it would be a waste of profitability just to buy something, the ready-made product.

Unknown speaker 10:04

We'll produce 1 million mega or more per annum. $1 million or more per annum. So that compares that we will have then 20 million of gross income. Then we have to have the expenses that, which are normally minor in a solar activity and will be contained by us with our knowledge of how to monitor local behavior with people like gardeners and maintenance not taking a toll on us.

Unknown speaker 10:35

But this is perannum. So we are speaking about making a bit of money by our new division. Of course, the attraction for the investors remain the big part of 642 million that we are supposed to receive from our three arbitration.

Unknown speaker 10:50

But let's say, even on its own, the solar part, you think that would be a substantial business and you're not sort of just, you don't have all your money on red or black. You do actually have a sort of a rounded company.

Unknown speaker 11:04

A company similar to us, which of course I will not name, listed in Scandinavia, has reached a market cap of $200 million, making a series of acquisitions. Then something went wrong. The company has not been anymore the same market cap.

Unknown speaker 11:24

But only in what we are doing is possible to reach the market cap we have today without the arbitration. Then we have as well the income coming from the arbitration, which will be a work for the next two, three years, but the two things go in parallel.

Unknown speaker 11:43

In a way, we have two pillars of the attraction of Genistock. And would you go harder into the solo when the money arrives from Tunisia? Yes, we should not, I can say, discourage some investors thinking that we will gain the money and then we will lose it in some investment, which is something that happens in life when somebody makes a great success, then become more lenient and less alert, and then lose what he has gained.

Unknown speaker 12:12

So we will be very careful. And as you know, we are strongly intended to make a distribution of some money to our investors that accompanied us as a whole for the last 10 years in this journey in oil and gas and now arbitration and renewable.

Unknown speaker 12:31

But certainly now we have a business that is very intense, electricity. Electricity shows today enormous contradiction, the fact that the renewables are a great plus, but as well a threat to the flow of electricity.

Unknown speaker 12:46

The grid don't know so well how to deal with the new multi-center production of electricity. The case of Spain and Portugal is a proof. The big accident of two months ago is a proof of this requirement of new technology.

Unknown speaker 13:02

There is the arrival of batteries to have electricity made in cheap hours of the day when there is the sun shining, then to be sold at the much higher price in the evening. There is a very interesting world to understand, learn and to make money out of it.

Unknown speaker 13:22

Well, we look forward to learning more. In the meantime, Andrei Cataneo, CEO at Zenith Energy. Thank you very much indeed. Thank you.

Unknown speaker 00:10

Hello and welcome to Zach's Traders Cafe. Today I'm joined by Andrea Castanea, who's CEO at Zenith Energy. How are you today, Andrea? Well, relatively well in relation to the circumstances, so how much I can be, but you know, as ready to fight and resilient and zever, even more.

Unknown speaker 00:31

So the team has close up and we are a tight and strong team ready to fight and even more disgusted by the shameful award. At the same time, as I am an optimistic, I note that the fact that the award is made in a shameful way and in an incompetent way is our fortune because under arbitration standard, at least in the case of ICC, as you know from our victorious case of ICC1, the other party, the one that has lost the arbitration,

Unknown speaker 01:17

cannot challenge the arbitration in relation to the focus or the matter or the subject that has been debate or the claims, but instead can be demanding annulment if there is some evidence of procedural irregularities or incompetent formatting of the work.

Unknown speaker 01:41

And then this is what is in various countries called corde cassación, cassation, cassazione. And so that is the case that we have here. We have a second strike of fortune. This case, although has always been called ICC, it was actually born as ICC Geneva, which we communicate to the market in the early days of these procedures.

Unknown speaker 02:11

As then the difference is minimal, but applies to us the difference. We always spoke about ICC and indeed the ICC has been debated in Paris, but this ICC is an ICC Geneva, so then the annulment will not be played in Paris court, which would take much longer, but instead in the Swiss federal court of Lausanne, which has a time of reaction between six and nine months.

Unknown speaker 02:46

So, I mean, in terms of where you are in the process, is this a sort of, you know, is a five-set tennis match? Are you one set down? Are you two sets down? How can we view this? Is it just a delay? What's the way of looking at it?

Unknown speaker 03:02

Well, you know, taking an example for Wimbledon, in the 10 years things, we have won the first set at 6-0 because it's been a tremendously blatant victory with a lot of interest and penalties and fees applied to the defendant, ETAP, which additionally an interest rate starting from the day of the sequestration in May 2022 of 14% per month, sorry, per year, but compounded every month.

Unknown speaker 03:40

And so that is a growing sum in which we can amuse ourselves when we enforce it. And then we have had this case in which we have lost a set, but then now this set will be considered null. And so if the set is annulled, we are again with one set won and then the second set unfortunately to be replayed.

Unknown speaker 04:07

While the most important set, the exceeding Washington is instead going fine. And obviously, this sentence doesn't influence ever because it's another system, International Chamber of Commerce is a contractual arbitration.

Unknown speaker 04:25

EXEED is the protection of the investing country subsidiaries or companies in respect to the treaty between the investing country, in our case United Kingdom, and Tunisia. So that is a treaty case and this treaty case use different methods and different parameters to judge.

Unknown speaker 04:50

So there would be no comparison. But in any case, the ICC2 now is frozen, is suspended, because we have made an application or we are making an application for enrollment. And is this something you would have expected given that, you know, it's a David and Goliath battle between a relatively small company and a sovereign nation?

Unknown speaker 05:13

So is it not that surprising that there's going to be a bump in the road as there has been announced this week? Well, you know, mainly that the bump in the road, as you well describe it, is due in this case by the incompetence of the arbitration panel.

Unknown speaker 05:34

So that is something that for the investor should be that is very distinctive. The arbitration court of ECSID is composed of very famous arbitrators. And so that is a guarantee of professionalism. This has been very unfortunate that we have had this hiccup, but at the same time, we have had the compensation of the low level of the panel by the fact that they made mistakes that they may lead to an annulment.

Unknown speaker 06:07

Do you think there's any bias in the process? I mean, just towards or against Tunisia or your company, or do you think it is actually been a fair process? Well, you know, we have to verify all the time.

Unknown speaker 06:23

You know, is certainly the war with Tunisia is acrimonious. And so we have, you know, we don't leave, we don't take prisoners and they don't do prisoners as well. So, but we are very competent. Our team is led by Professor Clays, which is the number one in France.

Unknown speaker 06:48

We are extremely devoted to our case and we are ready to invest as top shareholders of the company more money to bring this battle forever, including a second ICC BIS. And so, of course, it is always a little bit, I can say, uncomfortable to be Mr.

Unknown speaker 07:18

X versus the Republic of Epsilon. So to work against the state is always a little bit concerning. But what instead is comforting is that the state, especially small states, they have a lot of incompetence in their ranks, in their process, in their slow motion.

Unknown speaker 07:44

And so we are very much reassuring our investors that we are fit for the purpose and we are not David against Golia, although David has beaten Golia, but this is a mythical case. But in our case, we have very high quality advisors, quantum experts, lawyers, technicians.

Unknown speaker 08:10

So we are absolutely able at the same level, if not better, to fight with them. In addition, I want to say that we have as well the ethical aspect. Certainly, we didn't expect this accident. And when I spoke with you in the last seven months, I was very much comforted that we were going to win as well ICC2.

Unknown speaker 08:33

So it comes as a horrible surprise, but we have already absorbed during the night this terrible surprise and we are already inventing the solution, which yesterday was manifested by the recourse for annulment in the Swiss court.

Unknown speaker 08:54

And today will be another thing and tomorrow another thing. You know, we are very much on the fight. We have just not even lost the set because the set has been frozen at the moment. Well, we look forward to further developments and maybe a bit of a rebound in the Zenith fortunes.

Unknown speaker 09:13

In the meantime, Andrea Cataneo, CEO at Zenith Funnels. Well, we know that the price is so low that everybody can take the opportunity to take the joy of the rebounding of the stock. And when we'll be finished, the closed period that we have, because we are publishing our accounts, certainly the investors will look at it as a way to show to the peer, to the public, our faith in the future.

Unknown speaker 09:46

Thank you very much indeed. Thank you, Jack.

Unknown speaker 00:03

Welcome to this broadcast with Senate Energy and I'm happy to welcome CEO Andrea Catanio to the studio. Welcome Andrea. Good morning. You are here to discuss the development of the company and there have been some certain events.

Unknown speaker 00:20

Indeed. Financial preparedness for arbitration ICSID, your potential biggest asset. My question here is, is Senate fully funded to complete ICSID, the third and major arbitration expected to have hearings in Q2 2026, and to file the application for annulment of ICC2 in Lausanne.

Unknown speaker 00:48

Will any extra capital be required? And yeah, I can confirm that we are fully funded and we are able to complete the two big files, the ICSEED in Washington for 503 million and a very significant for us annulment procedures in Lausanne.

Unknown speaker 01:14

In fact, we are working 24-7 in both of them because their due date is imminent, only a few weeks. Okay, it's kind of technical, so I need to read a lot from my notes here to get it correct. Interpreting the ICC2 arbitration outcome, the outcome of the second ICC arbitration ICC2 was a significant disappointment.

Unknown speaker 01:44

Essentially, a complete dismissal of Senate's approximately US 130 million claim. How do you interpret this ruling and what do you believe were the key reasons behind such a result? And more importantly, what implications does this outcome have for Senate strategy going forward in terms of pursuing justice and compensation?

Unknown speaker 02:08

Instead of using my words, as is a highly technical subject, I prefer to read the quote of Professor Claes, which is the leading arbitration authority of France, which is one of our two lawyers in the three arbitration cases.

Unknown speaker 02:25

So he declared, after 32 months of proceedings, marked by numerous incidents that the arbitral tribunal proved unable to resolve and equally unable to maintain proper control over the proceedings, the tribunal has issued a 70-page arbitral award with only six pages of reasoning, dismissing in six pages all the claims totaling $130 million.

Unknown speaker 02:53

This was done while refusing to apply the applicable legal rules and contradicting a prior arbitral award. The countless cases of procedural irregularities were systematically recorded as formal objection, which will invoke in the annual proceedings to be filed immediately.

Unknown speaker 03:13

Okay, thank you. Challenging the ICC2 verdict, you have indicated that serious procedural irregularities were identified during the ICC two proceedings, and Senate plans to file an annulment application before the Swiss Federal Supreme Court.

Unknown speaker 03:35

Could you elaborate a bit on the nature of these irregularities and how they undermine arbitration process? Furthermore, how confident are you that the Swiss court will grant

an annulment of the ICC two award, potentially allowing the case to be reheard by a new tribunal?

Unknown speaker 03:54

And what is the timeline for this legal course of action? I cannot speak in details about what will be the content of our annulment application. This is in preparation and certainly we want to reserve till at the last moment the clarification of the format of our complaints and the request of annulment.

Unknown speaker 04:22

But just speaking strategically, for what is interesting most for the investors is the time of victory and then enforcement and then distribution of dividend. This doesn't change much. There is only a delay for the 130 million that we were seeking in the ICC2 case.

Unknown speaker 04:46

But the ICSID case is imminent, is just April 2026. And so then, while now we are working 24-7 to make this case application perfect with the final request by the tribunal and by the procedures, we will then enter in the final stage of this activity, which is only six months before the very important hearing, which culminates in five years of Tunisian investment and then sequestration and damages and arbitration.

Unknown speaker 05:22

So I think that we are very near to the end anyhow. Okay. Pursuing the ICSID arbitration treaty-based case, the Senate is pursuing a claim of 503 million under the UK-Tunisia bilateral investment treaty.

Unknown speaker 05:42

How does this ICSID case differ from the ICC arbitration in terms of scope and legal basis? And why do you believe the Senate can win the ICSID? It is fairly clear. The ECSID is a different type of entity from the International Chamber of Commerce.

Unknown speaker 06:02

It's sitting in Washington. Its full name, as you can see, our investor can see visiting the website of the ECSID, which says the ECSID, the World Bank, is an institution that has been created, the initiative of the World Bank, to compensate and to try maybe to compromise on claims by investors that have invested in an emerging country with the protection of a treaty which has been made long ago.

Unknown speaker 06:36

We have framed treaties between state and state. In our case, the applicable treaty is the treaty between the United Kingdom and Tunisia. So the ICC cases, ICC 1 and ICC 2, represented contractual breaches and then sequestration, I would say robbery of money and asset and licenses.

Unknown speaker 07:05

But then these same things represented in the ICC 1 and ICC 2 fall under the ICSID because they are breaches of the treaty. So the ICID in Washington is an umbrella case which covers all the sufferance that we have had at the initiative of the ETAP, the State Oil Company of Tunisia, and the Republic of Tunisia itself.

Unknown speaker 07:37

As the case number one has been already won, demonstrated the legitimacy of our claims, we are fully confident that a case of such importance, like the EXID in Washington, and with such a high-quality tribunal composition, court composition, will certainly find our claims very legitimate and will judge accordingly.

Unknown speaker 08:06

Okay, and we move on to settlement versus legal resolution. Have you considered a settlement with Tunisia? Of course, we are an industrial company. We are not a legal company. So we have made recourse to legal action, not one, three arbitration, which I remember to our investors is a very rare case that the company has three shots to its case, while the majority of companies they have normally one arbitration.

Unknown speaker 08:36

But we have recourse to this very important commitment financially and in human resources to make three arbitration simply because we were sequestrated, if not our

ideas to do business. So if the Tunisians will come with a practical and convenient settlement proposal, we will discuss it immediately.

Unknown speaker 08:57

Okay, and so far, it has not happened. No. Let's move on to your strategic development and operations. Your strategic development and long-term vision is in your latest press release you mentioned several acquisitions of development portfolios in solar energy.

Unknown speaker 09:20

Can you provide more detail on these initiatives and how they align with the company long-term goals? Yes, we have to remember that even when we invested in Tunisia, we had other branches of our industrial activity in other countries and as well in other types of activity.

Unknown speaker 09:39

For example, in Italy, we started in 2014 to produce electricity. This confidence in producing electricity that the Italian experience gave us has made us clicking on the idea that electricity was a good field with obviously a very long future in which we want to invest and learn.

Unknown speaker 10:02

And so we passed to the largest producer of electricity, which are the renewable, photovoltaic and theolic. And to start with, we have started in early 2025 to create a portfolio of photovoltaic assets.

Unknown speaker 10:18

Maintaining operational momentum, with the legal case timeline stretching into 2026, how does Seneth plan to maintain momentum in day-to-day operations and continue building the business in the meantime?

Unknown speaker 10:33

I would say that we have a tremendous momentum. If you look at the number of press releases that we publish and the number of acquisitions that we have done in the last four months, we started at the start of the year thinking to have a target of 20 mega of capacity by the end, so 51st of December 2025.

Unknown speaker 10:56

And today we can see from the announcement of yesterday that we have already reached 50. So from a target at the end of the year of 20 now we are already 50 and it depends to other considerations that I will discuss with you later how far we go before the year end ourselves.

Unknown speaker 11:15

So 50 is not the end of it. So there is a big quantity of news and news flows for the investors and result and achievement that we have done in the solar activity. The other activity as well continue well.

Unknown speaker 11:33

We have the production of electricity by gas, which is steady in Italy. And then there is of course despite the accident which I call really an accident in ICC2, the steady work which is massive of ECSED in Washington.

Unknown speaker 11:52

Of course the claims of 503 they are not just in the back of an envelope. They are massive hundreds and hundreds of pages demonstrating why our claims are valid, are correct. And then the amount when we make the next filing in September will vary depending on other things that have happened in the meantime, difference in market prices of commodities, additional breaches that the Republic of Tunisia has performed continuously.

Unknown speaker 12:27

So there is very much a momentum with news in the most appealing case, which is the legal case, but as well in an industrial development of the company. In a way, we are clearly looking not somebody making a claim, but somebody that has a very strong base anyhow, an industrialist, and then making a claim to seek justice.

Unknown speaker 12:52

Thank you. And you mentioned your gas and your gas power operations are profitable, but these new solar acquisitions are capital intensive. How do you plan to finance them? Yes, we have to look always to learn to the peers.

Unknown speaker 13:10

There are a lot of peers as well in Scandinavia, Swedish, Norwegian, Danish, Finnish, Luxembourg-based funds and then all these companies they have a similar goal to us to create an important portfolio and they make recourse to that or they make recourse to the equity of their shareholder if they are listed.

Unknown speaker 13:38

But we have seen that a lot of companies they have eventually in Italy, which is of course in this case the country where we focus at the moment, reach a too dangerous situation, which is a portfolio that is scattered in the quite different peninsula of Italy, in many different places.

Unknown speaker 14:02

And second, sometimes difference in permitting, because Italy is divided in many regions which they have a certain autonomy about rules, limited, but a certain autonomy. So then things that can happen in a few months in a place can take years in another.

Unknown speaker 14:21

And then debt is easy to have debt in photovoltaic because the banks are very prone to finance photovoltaic as they have the automatic crediting of the electricity which is sold daily, so then there is a strong security better than other industrial activity.

Unknown speaker 14:40

But nevertheless, to be with a bad portfolio and with a scattered geographical situation and an excessive amount of debt is something that we want to avoid. So our philosophy

that we have developed is that we will create the portfolio very intensively and fast moving.

Unknown speaker 15:01

We will have the financing, but we will always seek that our component of the portfolio can at any one moment be sold. In a way that we have a article test about the quality of our portfolio. If somebody wants to buy it, it should be good.

Unknown speaker 15:17

And after making due diligence, and then we have an automatic assess of cash, which can reduce debt or give cash for additional alternatives. Well, then what is the profitability in these portfolios of solar parks?

Unknown speaker 15:35

The profitability is remarkable. Just to say that we have made internally a study of what our portfolio of 50 mega will produce as it is, so at 50 mega. So taking this figure as an example, with 50 mega in production and being with the relation between north of Italy and south of Italy of, let's say, 35 mega in the north and 15 in the south, as example, which is more or less what we have.

Unknown speaker 16:10

And then the income growth for the next 20 years is 100 million Euro, which is quite an important figure. How we arrive to 100 million Euro is the calculation for the first 10 years of the future of electricity in Italy.

Unknown speaker 16:30

And then making instead prudent adjustment for the following 20 years and so arrive in the following 10 years, so arrive into a total income of gross income of 100 million for 20 years. To this you have to deduct the cost of maintenance, the cost of cleaning of the panel, the cost of maintaining the vegetation around the panel below under control in a way that there is no disturb to the irradiation.

Unknown speaker 17:03

We have as well for this calculation consider the differential between the solar irradiation in the north of Italy, in our case Piedmont, and in the centre sud of Italy, which is Lazio and Puglia, in our portfolio, because as you may imagine, the irradiation even in Italy between north and south varied substantially.

Unknown speaker 17:29

And of course we have to, in this 100 million gross income, we have as well to let people considering the financial adjustment, amortization, depreciation, and then the final abandonment of the solar park, which can be after not 20 years, which is in our prudent calculation, but after 35 years.

Unknown speaker 17:52

So as you can see, it's a profitable business which has its own traps. I think that the most important traps is the geographical choice and then the severity of the permitting investigation. Okay. And essentially, how can investors, well, what can investors look at in terms of operational milestones and performance while these arbitrations are ongoing?

Unknown speaker 18:21

Okay, so milestones are important because investors in a listed company look always to news flows, which are the transparent information of the company of what is going on. So one of the most imminent in only a few weeks is the filing of the EXID final documentation by the claimant, which is Zenit Group, then the filing in front of the Swiss Federal Court in Lausanne of the annulment procedure by our side,

Unknown speaker 18:56

the request in ICC2, and then in October the final verdict on the SNP case. Of course before and around this date there may be additional announcements of other acquisitions which can even be comprehensive of an expansion in production of other sort of energies, always in the space of electricity production, of course.

Unknown speaker 19:26

The key milestone for 2026 is of course the construction of finally of some of this solar park in practice with the panel being installed and then going into the grid, so in production. Possibility of buying more assets, so increasing our solar park portfolio.

Unknown speaker 19:53

Then maybe some announcement of the application in practice of our philosophy of selling some of our asset to a third party, which can be an important utility or a fund. In doing so, we are not just getting a check, we are creating as well an alliance.

Unknown speaker 20:11

Because if people see that we have made the right things, that the due diligence shows how our permitting has been severe, they have seen as well the creation of a cluster like the one we have in Piedmont.

Unknown speaker 20:24

So they say, well, these guys, they have made all the right things. So let's keep in touch with them to buy additional assets in the 27th or 28th. So this is an important alliance. Then in the meantime, months pass, there will be the award of the EXID, which we are very confident about.

Unknown speaker 20:41

And then we have as well to hear back from all the friends of the Republic of Congo about the $5.7 million that are owed to us. Okay. And how is the process of enforcing the judgment of ICC1 going? And when do you expect to receive the 10 million US dollar that the court awarded ETAP to pay Senate?

Unknown speaker 21:08

We are very busy in doing that, but unfortunately, enforcement is a very legalistic process and they cannot say much about it. Okay. All right, let's move on to financial outlook and shareholder confidence.

Unknown speaker 21:23

Aside from the arbitration-specific cost, can you clarify whether Senate is in need of any external financing over the next 12 to 18 months for either legal or operational purposes? Yes, so I think that we maintain our statement that we will be able to make the legal activity, which is what sometimes appeal most to our investors, without additional capital raises.

Unknown speaker 21:56

What instead is clear that our development of solar activity may well bring us to consider or to meet the opportunity of a peer that will sell some asset, maybe at a cheaper rate than in the market for whatever financial reason.

Unknown speaker 22:19

Then in this case, if we have to snap an acquisition, it is possible that we may require not only debt, but as well some equity injection. But this will be in the case of something that will be incredibly value accruing of the company of the stock value.

Unknown speaker 22:41

So I think that this will be if and when a very good news anyhow for the investors. We plan to have our financial development in a steady way by debt. That is not so negative in the case of photovoltaic, as I suggested before.

Unknown speaker 23:00

The photovoltaic equipment will be mortgaged in favor of the bank. Then the proceeds are going through our bank account and so there is a very heavy security on income. The sun is not supposed to disappear and so there are very many accidents in economy today, any sort of unexpected tariff and things, but at the same time the sun is shining every morning and especially in the part of the world where we are working.

Unknown speaker 23:35

And so this energy, which is very much in demand, will flow in the bank's coffer and so then will create an easy situation for that. So this is our comfort that we are not making recourse to the shareholders for the solar activity.

Unknown speaker 23:59

If we look at the recent happenings, Senate's share price has fallen by almost 80% in a relatively short period. In your view, what are the main factors behind this steep decline and most importantly, how do you respond to shareholders who are alarmed by the drop?

Unknown speaker 24:20

Well, I would say that we have, like for justice, confidence that the market is always right in the long term. But I think that in our case at the moment we are seeing a sort of nervous and disappointed reaction that has brought people to sell the shares and so we have had such a dramatic reduction of our stock price.

Unknown speaker 24:49

Nevertheless, the stock price has gone down, can go up and so we are confident that through various forms of communication, for example understanding our solar park strategy and practical process, understanding how sizable and well documented is the ICSID claim, which will be more understandable by investors because differently from ICC, the ICSID as a website in which our case is with some principle,

Unknown speaker 25:28

not in detail, but described and kept adjourned every day. There are news potentially being published by the EXID website every day. And so through research that will explain the quality of what we have achieved or what we are and then giving number, then the emotional reaction of a shareholder will be then evolving in a scientific assessment of what is the worth of one of our shares.

Unknown speaker 26:05

The board is one of the most invested board that we see around, certainly in UK. Myself I have in excess of 16% and then other, sorry, in excess of 10%, other directors are with us in the shareholder list.

Unknown speaker 26:29

And so we are, depending on the calculation, if diluted or undiluted, we are reaching important amounts. Our CFO, which has 3% of the company, has purchased shares yesterday and has made, of course, the required press release which appeared this morning to the eyes of the investors.

Unknown speaker 26:55

Myself, I plan to buy shares today. As you know, we directors, we cannot buy shares at our leisure. There are only few regulatory windows in which we are not in possession of confidential information and in which then we could buy.

Unknown speaker 27:15

Myself, I could buy before the big acquisition in which we announce on Monday morning, on Sunday, for the Oslo Boers and Monday morning for the English boars following the different rules, simply because we had this opportunity to snap 30 mega portfolio from somebody, which is a great quality in which Zenit has a long track record to be opportunistic, speedy, quick to snap acquisitions which pass by and before somebody else snap it instead.

Unknown speaker 27:53

So I think that all these qualities should give the confidence to the shareholders that we are worth much more. There are studies circulating in the market in this sense. And so I think that the fact that we buy as director as much as we can with the limit of regulations and the fact that the numbers that are appearing as future income are growing and growing, then the sentiment will bring the stock price back above one knock.

Unknown speaker 28:31

Thank you. I actually had a follow-up question there about skinning the game from you in the management team and board. Anyway, lastly, what would you like to say directly to Senate long-term shareholders who might be worried about issues such as delusion, ongoing legal uncertainties and the recent poor share price performance?

Unknown speaker 28:55

And how would you address the concerns and convince them to stay the course? And feel free, please, to share the key reasons on why you believe Senate's future and why you think patient investors will ultimately be rewarded for the trust in the company.

Unknown speaker 29:18

I think that we should reason together. The company, when he won the ICC1, which was a tremendously important psychological victory, because he gave the confirmation that our legal case was right. The sentence of ICC1, despite the smaller amount, was above 100 pages in total size.

Unknown speaker 29:46

And then the amount of pages dedicated to the reasoning were many, many, many. So there was a very well-built sentence, which everybody from both sides respected, and a great arbitration award. And that is the proof of concept, because the fact if somebody take away from you a pen or take away you the car, is the same principle.

Unknown speaker 30:14

It's robbering you of something. So the fact that we have been awarded a sentence saying, no, the pen is absolutely belonging to you, then is a confirmation that you are right. So basically, we have to remember that our legal case is confirmed and is strong.

Unknown speaker 30:32

The same case applies to all the same factor, the same legal base applies to all the three arbitration procedures. So that is the base for which we are so confident about the ECSID. The EXID is a very important tribunal based in Washington with a lot of gravitas.

Unknown speaker 30:53

The core composition is equally made by members, the three members, all having their own significant reputation and curriculum vite and position in the arbitrational world. So we are confident that justice will reward us in this case.

Unknown speaker 31:16

In the meantime, this was the same scenario that we had when the stock started to fly from 50 ERE to 71 and above 1 at the start of the year, reaching then 2 Norwegian krone and then eventually 2.30, 2.40.

Unknown speaker 31:37

But what has changed instead importantly is the fact that at that time we were a legal company with some industrial activity. Now instead we have already formed a portfolio that will be very substantial as industrial and cash flow.

Unknown speaker 31:56

So then not only we have the same comfort, I believe, if somebody can reason, if not we will not make an annulment procedure in front of the Supreme Federal Court in Lausanne, that our rights are the same, that was just an accident, and the IXID case will do well.

Unknown speaker 32:17

But on top of that, we have developed an industrial side of the company. So as we are shareholders, I can share with my fellow investors my total confidence and the board confidence that we have a great future.

Unknown speaker 32:32

Okay, that was all my questions for today. Andrea Catania, thank you so much for this business update. Thank you, Glorio. And thank you to everyone that has been watching. See you again.

Unknown speaker 00:12

Senate Energy have been granted an acceptance of an exploration permit regarding Italy's only uranium deposit. Standing beside me is the company's CEO, Andrea Cataneo. Welcome. Nice to see you again.

Unknown speaker 00:24

Nice to see you as well. I thought you could begin by telling us a little bit about the press release that you released here recently and why it's so significant for Senate Energy. Indeed. Zenit has received, through one of its subsidiaries, acceptance for the application of exploration permit in two mines.

Unknown speaker 00:45

And these two mines are the only two mines of uranium in Italy and one of the very few in Europe. These two mines are already built and so there is then an interesting aspect in that, although the process should start again from scratch.

Unknown speaker 01:05

Uranium is a very special product. If we speak about gold, oil and gas, there are enormous quantities of gold, oil and gas somewhere. It's just a question to extract them and then to deliver them to the market.

Unknown speaker 01:23

So it's a question of price and then instead the uranium is a very rare material, was even practically unfound around the moment of the discovery of his utilization in 1941. And so only after World War II there have been very important geological research, especially in Soviet Union, that has permitted to find large mines, large deposits of uranium around the globe, especially in Central Asia, as I said,

Unknown speaker 02:02

and in Africa. But there are many now nuclear stations under construction, so the demand depending on the favor which is growing of the government of Europe, is growing even in Europe. But the supply is not certain.

Unknown speaker 02:22

And so this make uranium a very special product to produce. Zenit then is very proud to be one of the few producers in future of this material and with the advantage that the mine that we are taking care of have been built and drilled 40 years ago.

Unknown speaker 02:46

And the in-situ metal value is estimated at 1.2 billion US dollars. Can you tell us how reliable that valuation is? Yes, it is, you know, as all evaluations, it depends on the quality of the parameters.

Unknown speaker 03:02

This situation is very reliable because the two mines have been drilled 40 years ago. It's not, in fact, a situation of greenfield exploration. It's a situation in which 25 kilometers of galleries have been drilled between the early 80s and the 70s and the 80s for the two different mine.

Unknown speaker 03:29

So it's a very solid fact, is not a speculation. Then the deposit in fact are assumed to be 15 million of uranium and that permits to say that there is a reality and not something that can be except marginally wrong.

Unknown speaker 03:54

The grades are very high. They are just to make a comparison which is very well known to some Swedish investors. The grades are five to six times higher than the VCAN suppose deposit in Sweden. And so the 1.2 is made at the market price of the uranium, which is between 77 and 83 bid and ask.

Unknown speaker 04:23

So we talk prudently a mid price of $80 per pound. And so this is an index of the price today. But the price should be perceived by the public in consideration of the fact that there is a strong demand.

Unknown speaker 04:41

There are many nuclear stations in construction around the globe. And instead, the uranium production is at the moment stable, but used maybe by other competitors of European stations. So there will be a problem potentially of Europe having its own necessity of uranium fulfilled.

Unknown speaker 05:09

So the fact to have uranium within the borders of the European Union is extremely important and in fact this makes the mines in Italy and Sweden very valuable. These numbers are made within the parameters of what being Canadian company, Zenit Energy, will be the certificate that eventually we will deliver.

Unknown speaker 05:38

That is the NI National Instrument 43101 of Canada, which is a reserve report that eventually will be or a resource report that eventually will be delivered to the public. And what is the plan for the deposit?

Unknown speaker 05:53

Does Senate intend to develop them in the long term or could you divest or farm parts of them? Zenit has a long history of continuity in its investment. Anything that Zenit has done in the last 17 years of existence has been brought forward for many years with the increase of dimension and increase of profitability.

Unknown speaker 06:21

So this is the tradition and the sort of track record of Zenit. So equally in this project there is the interest to make it long term. At the same time the project after a certain period will reach very important dimensions which may surpass the limit of Zenit balance sheet.

Unknown speaker 06:45

And so at that time and within this time there will be the entry in our capital of money from the EU, money from the various governments in which we operate, in the countries in which we operate, and as well some institutional investors or state-owned enterprises that look with great interest to the fact that we hold important quantities of uranium.

Unknown speaker 07:14

As Zenit has always made this culture of continuity, as we have demonstrated with our very successful campaign in photovoltaic, we are in a continuity mode, so we may buy another exploration asset of uranium around Europe in the future.

Unknown speaker 07:35

So certainly it's long term. Our point is to develop with the specialization in a sector like we have done before with electricity and gas in Italy, then recently with Photovoltaic to deliver important upside in added value for the investors through a competence and specialization.

Unknown speaker 07:56

You mentioned the possibility of listing a separate company. How likely is that to happen and when? Well, it comes out of what I said so far that the fact that this project has extremely important dimension in the long run, not in the next three years, but after some years of development.

Unknown speaker 08:20

And then the fact that we are very keen to see the shareholders, of which I am just one of them, long term and the largest in number, and so very close to the fortune of our stock price, one of the best solutions appears to be the spin-off of this project in one product only company.

Unknown speaker 08:44

And so of course the shareholders will be given the maximum advantage, the existing shareholders at the moment of the communication of the spin-off, because they will receive either shares or cash and shares of the IPO of the other company.

Unknown speaker 09:00

So it will be a success and that will give maybe the possibility to the uranium company to take off without any other distraction, being the arbitration or other activities in fossil or in green electricity, and so to be just identified as an uranium company.

Unknown speaker 09:22

So we plan seriously to make this spin-off. And in terms of Zenit Energy's broader strategy and value proposition, how does this development add to it? Well, obviously, Zenit Energy being an energy company, the fact that we add yet another mode of making energy, which is from uranium, shows our continuity, our consistency in the production of alternative energy, and the fact that we have been able to listen to the new wave of political sentiment,

Unknown speaker 09:59

which from Sweden to Italy, to governments that they have both been forefront in making the idea that uranium should be reconsidered as a green source of energy make us

proud to have picked up this sentiment and to have been able to scout such transactions before others, before competitors.

Unknown speaker 10:26

I should remind that Zenit is not new to this type of finding and coup. We have been able to enter the gas sector in Italy in 2012 with such a transaction, similar. In Tunisia, we made a fantastic transaction, which then eventually has brought to other development in arbitration, but has been a big hit for the investors.

Unknown speaker 10:49

So this is another of our scouting first, and so we are very proud of it. Indeed, uranium is among the critical raw materials for the European Union laws and programmes. And as the world is becoming more complicated by the day, and then the geopolitical aspects are becoming confused and somehow uncertain, historical supply from Africa and from Central and Asia is not appearing as secure as it was before.

Unknown speaker 11:25

Recent accidents, especially in Africa, have caused uncertainties in the consumer, which are big state companies, of this uranium in Europe. So then the fact that we are then a European mine will eventually permit us to be an European supplier to European buyers.

Unknown speaker 11:48

What about safety then? How important is it for Senate Energy? Safety is critical and very important for us personally. I think that for any CEO and for any top management team, the fact that to deal in dangerous material is something that creates in the years a long sense of responsibility and a long sense of even care, anxiety and prudence in any movement we do.

Unknown speaker 12:20

I should remind you that from 2010 we produce oil and gas, which are explosive, and polluting. And so then we have dealt with environmental agencies, environmental controls, environmental duties for the last 15 years.

Unknown speaker 12:39

And in production, you know, truly handling, delivering, storing and processing oil and gas. And then this has continued with electricity, which is another, for different reason, less dangerous, but still dangerous for the people operating the machines, the equipment, because electricity can create shock that can be little.

Unknown speaker 13:04

And so at the moment, in all this process, Zenit for 15 years has never had an accident, except a minor spillage because a valve has been broken or something like that, which has been immediately repaired.

Unknown speaker 13:18

And so we are proud and we want to continue with our care and track record in safety in this new world of uranium. Uranium is the cause of radioactivity. Radioactivity is something that is very alerting people that don't know it about.

Unknown speaker 13:36

It happens that two years and a half ago I finished and authored a book in which many pages are about uranium. So I have certain competence about the fat. And uranium, which was discovered in the 1800s and was initially thought just a material useful to make ceramic, has become instead in the 20th century a very important material for the reason that everybody knows.

Unknown speaker 14:06

But still people don't understand very much the element of radiativity, what is the danger of radiativity. Radiativity is all over us. There is radiativity in many activities that we do during the day.

Unknown speaker 14:22

The old television, before this plasma television, they were issuing radiativity. So there is sometimes a misconcept about the risk of radiativity, but nevertheless, our prime role will be, especially in the area of the mine, to guarantee the population and the rulers of these locations that we are very careful in anything we do and we have a pride to maintain the top level of safety.

Unknown speaker 14:53

Thank you very much, Senate Energy CEO Andrea Cataneo. See you soon. Thank you.

Zenith Energy | CEO interview - Review on Global Activities of Zenith Energy - YouTube

⏰ Wed, 02/11 18:04PM · 19mins

Transcript

Unknown speaker 00:03

Yesterday, it was announced that Senet Energy receives approval for an exploration permit for Italy's largest uranium deposits. For those of you who have not seen earlier interviews with Senate Energy, I suggest you find them on our channel for better understanding of today's discussion.

Unknown speaker 00:20

Senate Energy CEO, Mr. Andrea Cataneo, very welcome to the studio. Thank you. When it comes to yesterday's news, I'm not sure if I should say congratulations or well-deserved. I'm sure there's a lot of work behind it.

Unknown speaker 00:34

Anyhow, I noticed that you spend a lot of time in Stockholm. How many days would you say that you spend here a year? I would say 60 days per annum, which is 17% of my time. This has been the track record so far in the year 2025, especially the second part.

Unknown speaker 00:54

But I am planning to maintain this percentage, 17-20% of my time, for all the remaining part of 2025 and the full 2026. Okay. All right, let's move on. And Andrea, with all these recent developments, what is Sendit Energy today?

Unknown speaker 01:14

Yes, I am very pleased with this question because I think that when a company makes a lot of progress and broadening the scope of the company, then there should be some organized picture of what we are in a way that people don't get confused about the identity of the company.

Unknown speaker 01:38

So Zenit has been born in 2007. He's a company, so with already 18 years of life. He has been historically a junior oil and gas company, when that was the prevalent activity in energy, which remains still in the world the prevalent producer of energy, unfortunately, for the climate.

Unknown speaker 02:04

But recently, Zenit has moved into green, and we have an extremely important focus in producing electricity from solar. And so we have an important portfolio of solar parks that has been communicated to the market.

Unknown speaker 02:23

I am very pleased to underline that there has been a case in which we under-promise and over-deliver at the start of the year. The company said that it was targeting for 2025 a total portfolio size of 20 mega and then instead we have reached recently 98.5 and so certainly within the end of the year we will well surpass the 100 mega of capacity which means that we have done five times what we promised at the start of the day,

Unknown speaker 03:00

at the start of the process in the 1st of April 2025. So in a quite short quantity of time, space of time, we have achieved this sizable portfolio and not only we have taken everything that was on the panorama, but we have done the construction of three clusters, one in the north, South Piedmont, one in the center, Lazio, the region where Rome sits, and one in the south, where there is the maximum irradiation of sunshine,

Unknown speaker 03:33

which is in Puglia. So we have to remember, in fact, that we have in solar activity to admit that unfortunately the belt which is the Mediterranean belt, so the south of Europe, is the premium location for solar activity because above that, in the center of Europe or in the north of Europe, the percentage of irradiation can be as much lesser, so as little as 30% of what we achieve in the south of Italy or in Sicily.

Unknown speaker 04:12

Going further down, going to the North Africa, there are problems with the high temperature that makes the panel malfunctioning. So there is a belt, which is the south of Europe, in which there is a combination of respect of law, because there are EU countries, and so Greece, Italy, Spain, and France and Portugal.

Unknown speaker 04:36

And there is EU respect of law, good administration, but there is as well the maximum irradiation without malfunctioning. For various reasons, as we are producing electricity already since 11 years in Italy from fossil fields of gas, we have decided to focus for the start, for the first year, in making a solar portfolio in Italy, which is where we are at the moment.

Unknown speaker 05:06

So that has been taking months. People, they have an impression sometimes listening to comments that we are working in a vague project. This project is instead very solid. We have already achieved, by accruing such a well-chosen portfolio, an amount of accrued profitability that is between 14 and 20 million Euro, and so means between 1400 million to 220 million SEC.

Unknown speaker 05:42

And this will be communicated, as I anticipated already, to the market soon by a study that is made by an independent energy auditor. We are soon willing to start building the first of this field, this solar park, and then this will create cash flow in the company, which is already producing from a small solar park of half a megawatt.

Unknown speaker 06:19

Then we have had the historical activity in electricity made by fossil. This is something that we are not broadening but is continuing to produce very good income. We have to remember, sadly, that Italy, where all these activities are based, has the highest price of energy of Europe.

Unknown speaker 06:40

Then there is the historical business and asset that has moved the stock, let's remember it, to the peak of 2.5 SEC. At that time, we were not yet listed in Stockholm, so it was in Oslo, and then bringing the market cap to 1 billion SEC, which was the period between December and July 2025.

Unknown speaker 07:12

This business is the arbitration against the Tunisians, which were three. Arbitration one has been won with an increase in respect of the claims of 45%. And so a total amount of money due to us of $10 million, so $100 million, which is accruing every month, so we don't calculate it continuously, but it will be soon instead of $10 million, $11 million.

Unknown speaker 07:45

So that is something that we are busy enforcing, among the other things, so to get cash out of it. Then there has been the arbitration number two, which I will describe later. I know that you have in mind to ask me about that.

Unknown speaker 08:01

And then there is the arbitration, which is called ICSID in Washington, which has a claim of 573 million dollars. So what could you say of what is the status of the processes in ICSED, for instance? So the ICSID is now becoming again hot.

Unknown speaker 08:24

Sometimes in the past it was fought long away, but times inexorably pass. And so we are approaching the date of the 20th of April, where in Washington we will have the debate for one week about this case.

Unknown speaker 08:41

And we are extremely well prepared. Let's remember that our team is led by what is considered the most important person in arbitration in France. And let's remember as well that being in arbitration against Tunisia, the language that is by rule imposed is French language.

Unknown speaker 09:01

So Paris is the center of this type of arbitration professional for this type of arbitration in French. And so Mr. Professor Thomas Glase is top 50, one of the top 50 men in the world of arbitration, which is a very specialized sector.

Unknown speaker 09:22

We have as well another firm, which is CRSS Speechly, Paris Branch, with Maitre Simon Livita, which is a very well-known and capable arbitration specialist. Recently, in the last few months, we have broadened and reinforced our team because as well a very important aspect is quantum calculation and then justification.

Unknown speaker 09:50

You know, we ask 573 million dollars, but during the proceedings, people will say, okay, why 573 and not 300 and not 600? So there is an important ability to document and scientifically prove that our amount of money is calculated properly and that is convincingly the amount that we should be paid.

Unknown speaker 10:18

And so we are continuously looking to reinforce our team and maybe even to broaden it, maintaining the leadership of Professor Claes. Great. You touched upon your solar energy, but how would you describe the status of your full portfolio?

Unknown speaker 10:38

Well, you know, the solar portfolio. The solar portfolio is as described with many projects in the recent press release when we reach 98.5 megawatt of capacity. And we are very proud, although the speed of this process, to have done it with a very selective and picky attitude.

Unknown speaker 11:06

We have created clusters, so a cluster in the south of Piedmont, which is a small part of a region, which is large but not immense, and so Piedmont. And then a cluster in Lazio, which is even a smaller region, and the cluster as well in the south, where there is the biggest irradiation in Puglia.

Unknown speaker 11:29

So this cluster, what means a cluster, means that these solar parks are of various size, 2, 5, 10, 15, that you have seen in the table, the investor has seen in the table that we have always put at the bottom of our press release about Solar Park.

Unknown speaker 11:47

But then they are all within 10, 15 kilometers of distance each other. This means that the buyer of the final producing park will consider this smaller solar park as one. This makes the sex appeal of this park to the buyer, the final buyer, much bigger because nobody wants to buy bits and pieces.

Unknown speaker 12:17

But if somebody can buy 40 mega of capacity together, this is very attractive for producer of electricity, which are utilities. Because our technique is not only to build and bring in production for our portfolio, but as well, for cash reasons, to sell as much as 50% of this portfolio in a way that we have as well profit to report in our annual profit and loss report.

Unknown speaker 12:49

And so that is, we think, a clever attitude, which is flexible not only to build a long-term in 20 years portfolio making a lot of cash, but as well to deliver successes to the investors within one year.

Unknown speaker 13:05

This is the essence of the report that the energy auditor will produce, saying how much already we have accumulated of cash value. Okay, so that's solar and you've been active in many kinds of projects within energy over the years.

Unknown speaker 13:21

What other new projects are Senate Energy cooking now? You know, making too many projects without completing anyone will be confused, a distraction and is not our culture. We have always been able to bring and broaden the project in which we were.

Unknown speaker 13:44

For example, gas in Italy. We got this portfolio at very economic conditions and then we developed it and then we invent the idea to make out of gas electricity. We bought the equipment from Germany and we started to make electricity.

Unknown speaker 14:00

So that has been a long march from gas alone to gas to power, so electricity, and then from electricity from gas, electricity from solar. So we are in a continuity mode to learn from the previous business to move to the next one.

Unknown speaker 14:17

In the case of uranium, the thing happened for various fortuitous reasons, understanding the possibility, understanding the availability of these two mines, which are fully built with 25 kilometers of galleries already in Italy.

Unknown speaker 14:36

These require a lot of scouting, which is the same type of attitude we do to build the solar park portfolio. And then has been as well helped by the fact that two years ago I authored a book in which there was 30% about uranium and so I became a little bit competent in what then has become this acquisition.

Unknown speaker 14:59

So the company continues to cook potential deals for the future and especially because once it's finished the arbitration, arbitrary, an enormous amount of time that at the moment is devoted to the arbitration will become free for new initiatives.

Unknown speaker 15:16

But time will tell. For the time being, we can be very proud that we have built a strong solar park portfolio in just a space of one year, in the same year that we met and we exploited the opportunity of the uranium mine in Lombardy.

Unknown speaker 15:34

Okay, when it comes to the price of uranium, I checked that and it has tripled the last five, six years and there's a lot of interest in nuclear energy. How do you think the uranium price will develop in the future?

Unknown speaker 15:49

Well, you know, I am not a fortune teller, so it's difficult to predict precisely. But one thing that instead is very important for me to pass to our co-shareholders and generally to investors is to understand the difference between uranium and the other commodities.

Unknown speaker 16:11

If you look at the screen, Bloomberg television or other things, you will see that there are 30 minerals that are going every day up and down, and gold that is going to the sky and whatever. But all these minerals, zinc, copper and iron, whatever you think about, except

a few, they have very large quantities of available production and even more of additional deposit that can be drilled and can be brought in production.

Unknown speaker 16:46

So the quantity available are just limited by the time to make the process of the project completed. Differently, the uranium has a very small quantity available worldwide and especially in Europe. And then during the period in the post-war, a lot of geological research has been made, which has brought Central Asia to be one of the major producer in the world today, and Africa, a second large producer in the world today.

Unknown speaker 17:20

China, which is very close to both of these places, especially in Africa, has an enormous amount of nuclear station in construction, which then they will require the uranium as a fuel. You know, the uranium is the only thing that make this nuclear station functioning.

Unknown speaker 17:41

And so they have the ability to get this material because they control directly, indirectly this market. Europe instead has a very reduced presence in Central Asia and Africa politically, even more shrinking as France is retreating from its historical great position in Africa.

Unknown speaker 18:03

And so the European Union has warned that this material are becoming critical rare material. So the fact that we have uranium is not just a question of price, but a question to have it. Okay. Thank you for this update, Andrea Catone.

Unknown speaker 18:21

Thank you for hosting me.

Nothing in this recording is intended as investment advice, and the people in this recording may hold positions in the companies they talk about. Do not make any investment based solely on a tip or recommendation.

Unknown speaker 00:12

Please do your own research. Hello and welcome to Zach's Traders Cafe. Today I'm joined by Andrea Catanea, who's CEO at Zenith Energy. How are you today, Andrea? Not bad, not bad. You know, we have had quite some piece of news that we have communicated to the market a few minutes ago.

Unknown speaker 00:31

And I want just to illustrate to my fellow shareholders the opportunity that we have today. So these are great news. And I want to describe the case. So you're obviously having some legal battles with the Tunisians, but initially the Tunisian crude oil sale, obviously this is part of that kind of thing, isn't it?

Unknown speaker 01:00

Yes, of course. We are in three arbitration with the Tunisians. We have won the first with the outstanding victory. We have lost temporarily the second with the fraud. And then we are now going to the most important one, the exceed of Washington.

Unknown speaker 01:17

And this is a very important event in the 20th April. And the claims that we have placed are 573 million American dollars. So, you know, when there is a debate, the most important thing is the credibility of the party.

Unknown speaker 01:36

We are the attacking party, the demanding party of the claim and of this process, and then they are the defendant, which is the Republic of Tunisia. It seems quite surprising, not to use other unpolite words, which are not common use in the arbitration space, that the Tunisians, while being investigated for the sequestration, I call it robbery, of far asset in Tunisia, they have done it again.

Unknown speaker 02:06

You know, it's like somebody that is under investigation by the police for bank robbery and then rob another bank. It's quite, if you want, comical. And so then we produce in the only two remaining fields some oil, not much, because our life is aggravated by a series of burdens, again, to be very polite, in which all our activities are orchestrated in a way that we make losses and we spend money in a useless way.

Unknown speaker 02:44

But still we produce some oil. And then finally, this oil has been delivered to the joint venture, Maritap, which is the joint venture between us, 50%, and 50% ETAP, the oil estate company. And then they did it again.

Unknown speaker 02:59

They exported the oil without saying anything to us, without consulting us. And we discovered it through our network. And so they took the 100% of the money, like in the case of ICC1. You know, they have been beaten by a heavy sentence that they have still to pay.

Unknown speaker 03:18

And so they have been shown to the public how erratic and illegal is their behavior. Nevertheless, they feel untouchable and they have done it again. So how do you think that we should take this? Should we take this as a sign of, I mean, it's almost like a bit like the Russians at Russia or Ukraine when there's negotiations going on.

Unknown speaker 03:37

The Russians bomb a few Ukrainian cities just to sort of keep their intimidate. Is this a sort of intimidation strategy? Is it, as you said, a sort of an arrogant strategy that we just thought we're above the law?

Unknown speaker 03:50

How should we look at it? Well, you know, certainly cannot be intimidation because we have proved with three arbitration to be not intimidated by a bit. So we are very strong and this interview will prove it.

Unknown speaker 04:07

We are very strong. We are upbeat. We are extremely confident in justice, especially the ICSID is a fantastic system and process. I want to remind to our shareholders that is a treaty between United Kingdom and Tunisia, and then the breaches of the treaty of the investor, which are the three subsidiaries of Zenit.

Unknown speaker 04:33

So that is the case, $573 million, I repeat. Obviously, while in a long process, three years, in the final stage, because it's the 20th April, somebody commit another crime in front of the court, it doesn't sound very intelligent.

Unknown speaker 04:53

Maybe he's confident. Maybe he thinks to be intouchable that justice is justice. We are confident of justice. And to make another robbery in front of the court, I don't think is very intelligent. Could it also be that given that they might have to pay 575 million or whatever they've got to pay, they're trying to get some of the money ready for that?

Unknown speaker 05:16

Yeah, maybe they prepare for the payment of the 573, putting a penny after the other on the side. You're right. This is a very positive and gentle idea. And I think that anyhow, we should read as a summary this news as an extreme reinforcement of our case in front of the court.

Unknown speaker 05:41

So we have lost nothing because the oil was in Tunisia, nothing that we could dispose alone with our own goodwill. And so was there. And we were not deluded that we would have cash it. But at least I thought that certain manners and certain legal behavior would have helped their case.

Unknown speaker 06:08

Instead, they decided to do it brutally, and this helped our case. And so are you going to approach the court, or is this just something that goes on record when the next time there's a court is? Automatically in record, we have made immediately.

Unknown speaker 06:25

We are reacting. We are at the moment in the process of issuing the new claim. And, you know, we are extremely active. Our team, as you know, is stellar. Maybe we will even improve it. You know that we have brought another top partner in our team with the entrance of TWCOG, which is a London Singapore quantum expert used by majors.

Unknown speaker 06:57

So we have the best team that we can have against them, which they have only one lawyer. And we will see what the justice will give us in our relentless process to get justice. I remind everybody that exceed as an appeal, which is called annulment.

Unknown speaker 07:28

So in case we are not satisfied with the amount we gain, we will have then automatically a situation where we will have more in the process. But we are very optimistic. 573 is our claim and will be heard on the 20th of April 2026.

Unknown speaker 07:51

So a few months from now. We look forward to that. In the meantime, Andrea Cataneo, CEO at Zenith Energy, thank you very much indeed. Thank you. Thank you for your time.

We are soon willing to start building the first of this field, this solar park, and then this will create cash flow in the company, which is already producing from a small solar park of half a megawatt.

Unknown speaker 06:19

Then we have had the historical activity in electricity made by fossil. This is something that we are not broadening but is continuing to produce very good income. We have to remember, sadly, that Italy, where all these activities are based, has the highest price of energy of Europe.

Unknown speaker 06:40

Then there is the historical business and asset that has moved the stock, let's remember it, to the peak of 2.5 SEC. At that time, we were not yet listed in Stockholm, so it was in Oslo, and then bringing the market cap to 1 billion SEC, which was the period between December and July 2025.

Unknown speaker 07:12

This business is the arbitration against the Tunisians, which were three. Arbitration one has been won with an increase in respect of the claims of 45%. And so a total amount of money due to us of $10 million, so $100 million, which is accruing every month, so we don't calculate it continuously, but it will be soon instead of $10 million, $11 million.

Unknown speaker 07:45

So that is something that we are busy enforcing, among the other things, so to get cash out of it. Then there has been the arbitration number two, which I will describe later. I know that you have in mind to ask me about that.

Unknown speaker 08:01

And then there is the arbitration, which is called ICSID in Washington, which has a claim of 573 million dollars. So what could you say of what is the status of the processes in ICSED, for instance? So the ICSID is now becoming again hot.

Unknown speaker 08:24

Sometimes in the past it was fought long away, but times inexorably pass. And so we are approaching the date of the 20th of April, where in Washington we will have the debate for one week about this case.

Unknown speaker 08:41

And we are extremely well prepared. Let's remember that our team is led by what is considered the most important person in arbitration in France. And let's remember as well that being in arbitration against Tunisia, the language that is by rule imposed is French language.

Unknown speaker 09:01

So Paris is the center of this type of arbitration professional for this type of arbitration in French. And so Mr. Professor Thomas Glase is top 50, one of the top 50 men in the world of arbitration, which is a very specialized sector.

Unknown speaker 09:22

We have as well another firm, which is CRSS Speechly, Paris Branch, with Maitre Simon Livita, which is a very well-known and capable arbitration specialist. Recently, in the last few months, we have broadened and reinforced our team because as well a very important aspect is quantum calculation and then justification.

Unknown speaker 09:50

You know, we ask 573 million dollars, but during the proceedings, people will say, okay, why 573 and not 300 and not 600? So there is an important ability to document and scientifically prove that our amount of money is calculated properly and that is convincingly the amount that we should be paid.

Unknown speaker 10:18

And so we are continuously looking to reinforce our team and maybe even to broaden it, maintaining the leadership of Professor Claes. Great. You touched upon your solar energy, but how would you describe the status of your full portfolio?

Unknown speaker 10:38

Well, you know, the solar portfolio. The solar portfolio is as described with many projects in the recent press release when we reach 98.5 megawatt of capacity. And we are very proud, although the speed of this process, to have done it with a very selective and picky attitude.

Unknown speaker 11:06

We have created clusters, so a cluster in the south of Piedmont, which is a small part of a region, which is large but not immense, and so Piedmont. And then a cluster in Lazio, which is even a smaller region, and the cluster as well in the south, where there is the biggest irradiation in Puglia.

Unknown speaker 11:29

So this cluster, what means a cluster, means that these solar parks are of various size, 2, 5, 10, 15, that you have seen in the table, the investor has seen in the table that we have always put at the bottom of our press release about Solar Park.

Unknown speaker 11:47

But then they are all within 10, 15 kilometers of distance each other. This means that the buyer of the final producing park will consider this smaller solar park as one. This makes the sex appeal of this park to the buyer, the final buyer, much bigger because nobody wants to buy bits and pieces.

Unknown speaker 12:17

But if somebody can buy 40 mega of capacity together, this is very attractive for producer of electricity, which are utilities. Because our technique is not only to build and bring in production for our portfolio, but as well, for cash reasons, to sell as much as 50% of this portfolio in a way that we have as well profit to report in our annual profit and loss report.

Unknown speaker 12:49

And so that is, we think, a clever attitude, which is flexible not only to build a long-term in 20 years portfolio making a lot of cash, but as well to deliver successes to the investors within one year.

Unknown speaker 13:05

This is the essence of the report that the energy auditor will produce, saying how much already we have accumulated of cash value. Okay, so that's solar and you've been active in many kinds of projects within energy over the years.

Unknown speaker 13:21

What other new projects are Senate Energy cooking now? You know, making too many projects without completing anyone will be confused, a distraction and is not our culture. We have always been able to bring and broaden the project in which we were.

Unknown speaker 13:44

For example, gas in Italy. We got this portfolio at very economic conditions and then we developed it and then we invent the idea to make out of gas electricity. We bought the equipment from Germany and we started to make electricity.

Unknown speaker 14:00

So that has been a long march from gas alone to gas to power, so electricity, and then from electricity from gas, electricity from solar. So we are in a continuity mode to learn from the previous business to move to the next one.

Unknown speaker 14:17

In the case of uranium, the thing happened for various fortuitous reasons, understanding the possibility, understanding the availability of these two mines, which are fully built with 25 kilometers of galleries already in Italy.

Unknown speaker 14:36

These require a lot of scouting, which is the same type of attitude we do to build the solar park portfolio. And then has been as well helped by the fact that two years ago I authored a book in which there was 30% about uranium and so I became a little bit competent in what then has become this acquisition.

Unknown speaker 14:59

So the company continues to cook potential deals for the future and especially because once it's finished the arbitration, arbitrary, an enormous amount of time that at the moment is devoted to the arbitration will become free for new initiatives.

Unknown speaker 15:16

But time will tell. For the time being, we can be very proud that we have built a strong solar park portfolio in just a space of one year, in the same year that we met and we exploited the opportunity of the uranium mine in Lombardy.

Unknown speaker 15:34

Okay, when it comes to the price of uranium, I checked that and it has tripled the last five, six years and there's a lot of interest in nuclear energy. How do you think the uranium price will develop in the future?

Unknown speaker 15:49

Well, you know, I am not a fortune teller, so it's difficult to predict precisely. But one thing that instead is very important for me to pass to our co-shareholders and generally to investors is to understand the difference between uranium and the other commodities.

Unknown speaker 16:11

If you look at the screen, Bloomberg television or other things, you will see that there are 30 minerals that are going every day up and down, and gold that is going to the sky and whatever. But all these minerals, zinc, copper and iron, whatever you think about, except a few, they have very large quantities of available production and even more of additional deposit that can be drilled and can be brought in production.

Unknown speaker 16:46

So the quantity available are just limited by the time to make the process of the project completed. Differently, the uranium has a very small quantity available worldwide and especially in Europe. And then during the period in the post-war, a lot of geological research has been made, which has brought Central Asia to be one of the major producer in the world today, and Africa, a second large producer in the world today.

Unknown speaker 17:20

China, which is very close to both of these places, especially in Africa, has an enormous amount of nuclear station in construction, which then they will require the uranium as a fuel. You know, the uranium is the only thing that make this nuclear station functioning.

Unknown speaker 17:41

And so they have the ability to get this material because they control directly, indirectly this market. Europe instead has a very reduced presence in Central Asia and Africa politically, even more shrinking as France is retreating from its historical great position in Africa.

Unknown speaker 18:03

And so the European Union has warned that this material are becoming critical rare material. So the fact that we have uranium is not just a question of price, but a question to have it. Okay. Thank you for this update, Andrea Catone.

Unknown speaker 18:21

Thank you for hosting me.

Transcript

Unknown speaker 00:00

And the Milatism alive. Then a blow stop. Sociology or algorithm. So, that is banned. So, look at Spotify Spillista. So, there would be a comtat man in the music industry and speculative. Also, Studio Spotify November.

Unknown speaker 03:18

For Banner, for the music industry, so I'm going to go to the book. We hold it for Susaki Meroka. So, I don't know how to interior, or if you talk to me, so truly, truly cool sock. And we can also think about the work that must be AI.

Unknown speaker 04:49

So, opera doxyla or the black stamp. Or, double lanfolana. So, English projects, malum man and machine. Kugor English. So, I think the music branch and the music is symptomatic for what. So, there are large things.

Unknown speaker 05:56

This is a problem. So, this one is a bit of a power some humans and disempower others. So, the museum can be used. Absolutely. So, the Andre Andre Kanlar England story and the hatred we're all fucked.

Unknown speaker 07:42

We're all fucked. And Entrepreneurska, or the project, I've titled the lesson. So, we have to gratify it. So, they are implicit and we are going to be able to do it. So, the league factors are YouTube Canal RAS.

Unknown speaker 10:33

Block Fletcher Andrew Talent Block Flat Tin Whistle. So, the instrument and logo is a little bit more difficult. So, a little fun fact, but no, I do not think. So, I think the studio technique is a little bit more than Marcus.

Unknown speaker 12:13

Going international. All right. All right. Can you hear me? Yes. Good morning, Andrea. Welcome. Nice to see your face. Likewise. Hello, Andrea. How are you? Very well. Very well. Okay, this is maybe the first time our readers have seen you live.

Unknown speaker 12:48

So I think I just give you the word and you can tell us a little bit about you and the company. Absolutely. When you then go, there you go. Yes, you can just start, Andrea. Okay. Maybe if you could just put the microphone slightly closer?

Unknown speaker 13:10

Microphone slightly closer. Is that the maximum? It's okay for you? Yeah, I mean. That's fine. Good. Where are you now, Andrea? Are you in London or in Switzerland? I am in Switzerland. I am in Switzerland and the European Head Office of Zenit Energy.

Unknown speaker 13:39

After staying many years in London, Zenit two years ago has relocated in Switzerland because of the better centrality and the less difficulty in transportation. As we are a very international company, as we demonstrated in the last year of activity, a central location is extremely important.

Unknown speaker 14:02

And so we have two airports nearby us, relatively nearby. And we live in a small town which is very efficient and which has a microclimate. So that is an interesting choice. And so as you know, I run Zenit since the creation of the company in 2007 and has been really an epochal change because in 2007 there were still in Calgary where we have created the company as we are a Canadian company, there were 575 oil and gas junior covered all over the world.

Unknown speaker 14:46

And so this was very exciting. And the town of Cargai again is a very efficient town where to work. You can build a company in the building in which you are because they are skyscraper of 55 floors where there is in the various floors everything you need to create a listed company.

Unknown speaker 15:07

So the Toronto Stock Exchange has been excellent as a launching part. Unfortunately, then the subprime crisis came in America, which you remember in North America, which you remember the incredible negative effect, and so we moved to London.

Unknown speaker 15:22

Yeah. Exactly, exactly. There have been a lot of development around the company last month. Can you explain a little bit what's happening around you and your company, the possible spin-off of the uranium?

Unknown speaker 15:41

Can you talk a little bit about that, Andrea? With pleasure. So, you know, the company has changed tremendously in the last three years and even more in the year 2025. You know, we have been robbed by the Tunisians of all our oil and gas assets in North Africa in 2022.

Unknown speaker 16:03

We started the tree arbitration, which is a very rare thing. Sometimes you find companies that they make one arbitration and you have to bet on the result of this one arbitration. We have made three.

Unknown speaker 16:17

And then we decided to leave the overseas market like Africa, Central Asia, Latin America, and we concentrate only now in Europe. So we are safer in the respect of our asset, the rule of law for our shareholders.

Unknown speaker 16:38

So our shareholders are nevertheless recompensated for this sequestration because there is a tremendous potential in the third arbitration more than the previous two because it's $573 million of claim.

Unknown speaker 16:53

And I will speak when you want about it. But this year, we have gone fully into the transition, even if this year transition is a little bit less inflation because there is a return to hydrocarbons. And so we have started a very successful campaign of building a photovoltaic portfolio, which in the north of Europe we call Solar Park.

Unknown speaker 17:20

And so, of course, the Solar Park need sunshine, and the sunshine is at best irradiated in the south of Europe. Somebody will ask as a curiosity why we don't go further down to Africa. The answer is no, because above a certain temperature, the panel crack or malfunction.

Unknown speaker 17:46

So the best is the belt between Italy, Greece, France, Spain and Portugal. And because we already produce electricity in Italy, we started in Italy. So we have only one year, less than one year, it's not even yet the end of the year, we have built a portfolio of 110.5 megawatt.

Unknown speaker 18:08

And there was a certain incredibility, especially in Norway and Sweden, because the experiences with solar companies in Sweden has been quite unsuccessful, but people are alerted to distinguish between a company operated in the north of Europe, in solar, and a company operating in the south of Europe, in solar, which is a big difference.

Unknown speaker 18:36

And yesterday, Andrea, you came with a report of the valuation of the 110 mega of solar. Can you tell us a little bit about that report, the valuation report? You know, there was a certain sense of saying how good is it, how big is it, and a variety of questions.

Unknown speaker 18:58

And so we thought to ask a very serious, specialized power grid and electricity advisor to make this assessment and to publish it. And then we communicated to the market in the press release of yesterday.

Unknown speaker 19:16

I thought it was essential that people know what we have done in 2025. So we have built something that is worth 27.5 million Euros. And then this, in our strategy, this portfolio will be 50% sold. So we will sell it and we will cash it having money from profitability rather than from other sources.

Unknown speaker 19:43

Yes, because that's the new one, Andrea. Because the investor don't understand the business case, but now you have gone out and said that we will profit to sell the 50% of it and use this to capitalize up the projects.

Unknown speaker 20:00

Is that correct? Yes, and then it is a merry-go-round, you know, after selling 50% of the portfolio. In the meantime, we rebuild another extension of the portfolio. So we are

swinging between certain size of the portfolio, making cash and as well learning, if any, from previous mistakes.

Unknown speaker 20:24

You know, we are always learning and we believe that what, in the opinion of all the experts we have shown our portfolio, the portfolio we have assembled is a clever one because we have made the portfolio only concentrated in three regions, three clusters, not even region, sub-region, provinces.

Unknown speaker 20:49

And then in these provinces there is sunshine, but there is as well a very good tradition of permitting and a very reliable grid, so connectivity. So the point in Solar Park is to be permitted to exist and then to be connected to the grid.

Unknown speaker 21:10

And then to our exam. Yes, yes. I have some shares in your company. I bought some shares in the Swedish SDR. We have seen a magnificent raise of the capital stock the last month. You're up about 50-60% from the bottom.

Unknown speaker 21:33

Will you say something about the IPO in Sweden and what you think about the stock now, the next three months, without revealing inside information or something like that? We need to disclaim that? No, no, it is clear.

Unknown speaker 21:52

I will do that and it is very easy for me to do that. And the point is that there is a very interesting opportunity created by the fact that we receive some documents from NordNet and we thought that NordNet was a fund.

Unknown speaker 22:15

Instead, we discovered that it was a Swedish stockbroker with many, many shareholders. And so to make the long story short, we discover early January 2025 that we had Silca 5,000 shareholders of Swedish nationality in Aeronex, Oslo.

Unknown speaker 22:35

So we said, well, if so many, they've gone cross-border to buy in Oslo, why not to connect with them and to see them in Stockholm? So we went to Stockholm and through that we decided the list innings spotlight, which we did.

Unknown speaker 22:54

And we are very pleased with it. The initial, you know, when you arrive to a place, you have to organize your relations and again connectivity, connections, and to discuss the right strategy with the right people.

Unknown speaker 23:09

Initially, the stock didn't perform very well, but then when we adjust a few aspects in our team, then the stock was understood for what it is, highly undervalued. And so the stock has made a raise because there is a tremendous potential in our company for the values that we have accumulated on it during 2025.

Unknown speaker 23:35

Yes, and now you are going all in in the strategy against Tunisia, Andrea. You have hired up a good team with Ben and Matteo, Juratovich and Gregory from the Essex court chambers. Can you tell a little bit about that strategy?

Unknown speaker 23:57

What you think about, how will it impact your chances for the arbitration case? Well, you know, arbitration is a very unique word. There are various aspects that are very different for normal courts, and there is a need of extreme credibility and competence.

Unknown speaker 24:23

And so we thought that to add a third law firm with, in this case, a barrister firm, so a chambers, in England, would help very much. We shall remember that our case in the ICSID is a treaty breach. In a few words, what means that the Tunisians doing what they have done, they have breached the treaty between United Kingdom, where we were sitting, as you know, in 2020 and 21, and Tunisia.

Unknown speaker 24:57

So doing that, it's very important that we have a specialist of this treaty, and the two lawyers that have reached us, they have this special knowledge, intimate knowledge. So that is an additional strike of competence and strength for our team that was already stellar.

Unknown speaker 25:19

I remind you that the main lawyer of our team is Professor Thomas Clay, which is sort of an authority in France. We are always speaking of France because being Tunisia, the defendant, we have to play in French language.

Unknown speaker 25:38

Exactly. And the court now, is that in Paris or in Switzerland? No, no, the court of this institution, Exceed, is in Washington, and then we will see what is the location that is selected for the hearing, which can be another building of the World Bank.

Unknown speaker 26:00

But always under the auspices of the World Bank, which is very comforting. And so that is the top of arbitration justice that we can achieve and look after. Possibly, our broadening of the team is not yet finished.

Unknown speaker 26:21

And so we are giving all the shots to make these seven days in court on the 20th April the best performance that Zenit can give in this case. Although we have at the moment created other values, which maybe are even bigger than the 573 million of the XCID

case, still the 573 million claim is an important asset of our shareholders, and we should play it at best.

Unknown speaker 26:58

And you know, even at the risk of looking asleep, we are working in this preparation of the 20th April at the maximum focus. Yes, so the hearing is 20 of April next year. Yes, yes. In a few months, as you know.

Unknown speaker 27:19

In a few months. And the thing that really got investors' attention last weeks have been the uranium possible spin-off. You have told a little bit about that, but can you tell me a little bit about the mine in Italy and how you're thinking about how to organize it?

Unknown speaker 27:42

Yes, of course. You know, we are constantly chasing our new industrial identity. We were producing oil and gas. Now we have stopped to produce oil and gas in overseas market, in emerging market. And so the identity should be something that we can do in the best place for the respect of law, which is Europe, and where we sit.

Unknown speaker 28:10

And then this has been selected to be solar, but there are as well other forms of energy. One of this form of energy is nuclear. And so there is at the moment in Sweden, in Italy and in other few countries that they were against the nuclear station, a new understanding that nuclear can be the solution about the very late and delayed process to leave fossil to go green, because this is going very slow and everybody is worried.

Unknown speaker 28:49

So just imagine that in Italy there will be possibly a referendum and the chief of the referendum pro-nuclear is the man that in 87 guided the referendum anti-nuclear. So what made this man, which is clearly an environmental specialist and passionate campaigner, is the fact that in this nearly 30 years of distance, nearly 40 years of distance of time, the condition about nuclear have changed tremendously.

Unknown speaker 29:23

Nuclear is safer, is smaller, is less risky, and then fossil is remaining too big to continue like that. So that is the thing, but we are just a small player in this worldwide evolution. What we will do, we will supply the product, the fuel that is the uranium.

Unknown speaker 29:49

So we have had the opportunity to encounter the possibility to apply for two exploration sites and we have applied for them. We have been approved, subject to environmental studies, which we are doing.

Unknown speaker 30:06

You know, Italy is a beautiful country for tourists, so everything is done in an incredible respect of environment. And so there are the exam like at school, the exam never finish. But we have to say on the other side that we have not a two golf course, as a few other people have, in which they say that underneath there is uranium.

Unknown speaker 30:31

We have 25 kilometers of tunnel already built between 1960 and 1984. Yes, yes. And that will be a tremendous benefit for you before you start up because you don't need a big expensive to start up. Have you seen, Andrea, the news from the UK?

Unknown speaker 30:56

They have decided to build small modular reactors. Have you seen that news? Yes, yes, yes. It's a continuous evolution in Europe about governments that are thinking to do it. You know, it's a political process.

Unknown speaker 31:15

We cannot guarantee that the nuclear station will be built in countries where they cannot be built now, like Sweden and Italy. But the point that we have to know, simply as Zenit, is that there are nuclear stations in Europe that need uranium.

Unknown speaker 31:35

And at the moment, uranium is becoming scarcer and scarcer, because uranium doesn't grow in Bergen. Uranium sits in various parts of the world, but in small quantities proportionally to the use. And the majority of uranium is in Africa and in Central Asia.

Unknown speaker 31:57

And then this country, as the European Union understands today, can grow in a different direction from our direction, political and social, and then maybe they will not be willing to deliver to us the uranium.

Unknown speaker 32:12

So we will remain with the central station without uranium. So that is important to secure the sourcing of uranium within EU. Yes, because the BRICS, you know, the BRICS countries, they have total control in Africa and Asia now.

Unknown speaker 32:31

So rare minerals in Europe, I think that's political high sensitivity assets. And we even had Jens Nihuang, the COE of NVIDIA, the other day that said that the only solution to the AI energy demand is to build out, to have basically small nuclear reactors all over the place.

Unknown speaker 32:56

And he's predicting that's happening in the next six, seven years. A lot of people say that. So we are listening with pleasure, but at the same time, we are not directly involved in that game. We are involved only in producing uranium that can be sold to others, even if the referendum will not succeed.

Unknown speaker 33:19

I make you an example. Australia is a big producer, one of the biggest producers of uranium, but still they cannot build a nuclear station. So the two things are distinct. And

as an energy producer, like before we were giving gas, now we will give uranium to the people that are in the game of using the uranium.

Unknown speaker 33:42

But the company will distinguish from the problem of the referendum. We will make uranium which is in short supply. But at the same time, the uranium business is so big for a company like Zenith that we really believe that the uranium deserve a company only dedicated to uranium.

Unknown speaker 34:04

And so for that reason, we have publicly already said since 15 days in various forms that the intention of the board is to find the solution to spin off the uranium in something dedicated only to the uranium.

Unknown speaker 34:22

Why? First of all, the uranium is so big that is the uranium business of Zenit is so big that is a company maker alone. As a standalone is already a company maker, the attraction should be enormous. The second thing is that people, when we see the company having this activity in uranium in Italy and maybe more in Norway and in Sweden where there are exploration sites suitable for uranium research,

Unknown speaker 34:56

then they will look at the company as uranium producer and not anymore confusing with arbitration, photo type, solar. So I think that that will permit the research, the bankers and as well institutional investors that will be confused in a company having two or three activity to invest long term in this company that is instead only focused on uranium.

Unknown speaker 35:25

So that is the reason of this choice. This will be a great opportunity to reward our loyal shareholders because of course these people have been the shareholders with me. I am the biggest shareholder as you know, about 10% which I want to keep as a level of presence the company shareholder base.

Unknown speaker 35:49

But I should say that all the other shareholders with me have made a great job to ferry the company through the sequestration of Tunisian, the battle initially. And now we are at this fantastic stage.

Unknown speaker 36:03

I think that the spinning in a new company will permit rewarding the present shareholder and give them a future separately in a different company. Perfect, Andrea. Perfect. I think we have it. You are going to a meeting and you are a very urgent man, so you are going to meetings.

Unknown speaker 36:25

If I may, a few words about the Exceed. Yes, yes, please. It is important to think that the Exceed is, first of all, a big ticket, 573 million, which is a big quantity of money. The second thing, we have a very good court made by outstanding personality, which are members of the court that is judging us.

Unknown speaker 36:51

The third is that, as we have just said, we have reached, not yet finished, but we have reached a stage in which our team is stellar. But the base of everything is that we are right. And the fact that we are right is even comforted by the fact that one week ago, it's one of the announcements that you suggest I was commented upon, one week ago the Tunisians, they have yet to rob us of our oil once more,

Unknown speaker 37:19

which is quite farcical, the idea that during the preparation of the court, the Tunisians, they enjoy themselves in robbing yet another time after what they did in 2022, which is quite a little bit in the past.

Unknown speaker 37:35

So they have refreshed the memory of everybody with Robinas yet again. And so that I think that could be a good present that they made to us. And so that is favoring the success in the exit case. Assuming that you have a favorable ruling in the arbitration, do you expect that you will be able to monetize the claim?

Unknown speaker 38:06

Because obviously the Tunisian government is not acting in good faith, it seems. Well, you know, Tunisia is a country. At the moment, the executive, they behave in a certain way. But the tradition of Tunisia, we have to remember, has been to pay all their losses in arbitration in full.

Unknown speaker 38:30

So the history of the last 40 years is that Tunisia has always paid in full their losses when they were sentences negative has not happened. And yet, but our first sentence is against the oil national company, ETAP, which has only activity in oil.

Unknown speaker 38:54

Instead, when we have a sentence against the Republic of Tunisia, we will have a much broader panorama of assets to enforce and to get paid. So it will be much easier. So if I understand you right, Andrea, that the Tunisians have assets abroad that international court can seize, yes?

Unknown speaker 39:17

Then it can cease. Yes, then it can cease. Using the sentence, yes. Good, good. Very good, Andrea. So what is the plan today? What is the plan? The plan is to work. You know, the most important thing is to work for the success of Zenit and to have a good end of the year and move in 2026 with the crystallization of the results in what we built in 2025.

Unknown speaker 39:50

Where in Switzerland are you based? Lugan. So you have company from many Norwegians nowadays. Absolutely. Absolutely. I didn't want to say, but it's the favorite place of arrival and relocation of some famous Norwegian.

Unknown speaker 40:10

It's a splendid city you should come to visit. And you have only a short way to Milano then. Yes, yes, Milan, Tsuwik. There are two airports that are within two hours traveling, which is nothing. Very good, Andrea.

Unknown speaker 40:28

Thank you for coming into the studio. I hope to see you soon again. And good luck. And Merry Christmas to you. If I don't see you. Merry Christmas to all the team of your wonderful company and take care.

Unknown speaker 40:41

Thank you. Thank you. Have a good day, Amra. Bye-bye, Christopher. Bye-bye. Chat to you. Yes, I'm not sure. We mobile disclaimer. Capital markets are set up for Salzkapa. Hope like that. So there can't be a value model.

Unknown speaker 41:49

Absolutely. Andrea? The story is in Book. So this is also Nilihat and live streaming. That's not for crochet form of Aio and Data Centre. They are hostile. So Spanish. Or the train of Elwood. Europe and Geopolitis asset.

Unknown speaker 43:29

But the European Union, we started Europe. So Iran, the Alexander Finnish substitute for Iran. So Italy for Iranian infrastructure. And we have a spin offering IPO and institutional bank or something.

Unknown speaker 44:28

And we have no idea. So through the effort that is possible to Europe, Europa, or Eric Wancliffe funding for React. I think it is in action. So I think it's a lot of fun. So this plan goes on how to, for example, how do you ensign it actually?

Unknown speaker 45:48

Or IPOD so that you will be offensive and investor presenters. But we can offensive and cells on SNET village. So I told you optagor user case for oblique and that's been a case of article so far. There's been some in the group in Italy.

Unknown speaker 46:56

There are some black rocks grievous. Flaskals are computer data craft infrastructure and infrastructure in the steering energy tilde nuclear Channel and the nuclear weapons. This modular reactor is the arial train of Tilburg.

Unknown speaker 48:33

So the ultimate blossom, the top and the city of the world, and Chanekaft and Norge and the UK. So comment here that Swaldar when Ino Det Swalder Shanikrafturn, some part of that. I think it has to be solved, but it's not a very good thing.

Unknown speaker 50:04

I feel like it's more or less financial. It's a subsidiary for the viscal. So we're not going to be able to do it. So share that salt for it. So explode. Fuglestan. So this is an argument remote survey and fly.

Unknown speaker 51:54

Other economies of European European European European. And Uspad Bad Tutorial. So Newton Richardson. How about control for politics? And if you mean politics or someone. So there's some hands there.

Unknown speaker 53:55

Ichino Harwark nestled. But it's not one ring. The Vises Pool comes in Hellerupa. Also today, in Human Stampiat. So we have the Gore Leaders Huddlestock. I skeptic Tori Mapulum. So I say I go market baggage.

Unknown speaker 55:29

So the first thing that the Europeans produced in the Herlubenson producer started to specify the completion for the segment. So we have a product. But we are hard. So X family, or interest or battery and battery partners, the story.

Unknown speaker 56:32

So it is affected by the required battery rest. But all the things. And the battery cups that are expressed, stupid. You can see it. So you can. That's it. No, the best genes bill and 60-30 mil. So the goal is for pang and choppin founti region house which is coming to the reproduction of a breaking smote incubating small shotgun backtrack technology.

Unknown speaker 57:59

But if you have Marcus, thank you. So Thai can overhang and regime. So let's go for the presenter against the financial flat not the high agencies on rental search products, expensive financial jobler.

Unknown speaker 59:28

I probably can't be so chip and plan. I had a Lusband Rover sprout. Yeah, nice. I skewed ankle with chat bands on. So I'm going to go to the next one. Super fun. Odie Gobila. I was going to say that.

Unknown speaker 01:00:35

Do you have a chance to do it? I have the problem. The kind of consolidation. China League. I would recognize a new man. But I made it. So a few jurisdictions. The best indicator. So Tilly Nitals. Commonly.

Unknown speaker 01:03:21

So the behind European. And Bordeaux. Super Frankman. Or motivate personal or prisoner. Suley and Bill. He was an ex fan. So my first market. Glenn, I can adopt my insect and the same thing. Restore Dubai.

Unknown speaker 01:05:32

So how possible is the token? So that's the Dubai. Political travel for Chatel. So 6 coma 2% is 60% and 65%. I'm going to say 9sk. Oh here, Gorda Etrohubli Trash Filsendevalki. Macrona Nano. Retroport.

Unknown speaker 01:08:09

For the starkest tournament, I think it's a very good thing. For the colour of Donald Trump, I was a fan of Donald Trump. Politics corrected the best shadow. But some Surani New York radicals, Maliski and Talah.

Unknown speaker 01:10:42

So the second one in reality is that the first time we have to do this, you can see that the market is a very important strategy, Ukraine, Russia, Frisco Central Bank Medler for Kraina. Yes, I will tell it.

Unknown speaker 01:12:17

Zenith Energy | CEO interview - Review on Global Activities of Zenith Energy - YouTube

Transcript

Unknown speaker 00:02

Senate Energy has delivered a lot of news during the last days. And to put some color to that, we have Indo Studio CEO Andrea Cataneo. Welcome and could you please give us an update on the latest news?

Unknown speaker 00:15

Good morning. With pleasure. So Zenit has delivered mainly in the last two days two important news. I comment first on the one of this morning, which is the evaluation of our solar park. As you know, for a variety of reasons, in Sweden, the solar park development has been taken with a certain distance because people refer to the experience that they had with similar companies making solar activity in Scandinavia.

Unknown speaker 00:45

And that, of course, is not our case. As you know, we are just considering that the north of Europe is fantastic for hydroelectric and iolic, but as it should be, the south of Europe should be the focus of operation of solar parks.

Unknown speaker 01:02

So our solar park operation started in Italy, where we are producing electricity since 13 years. Because of that, we have a certain experience and a certain comfort with the procedures and with the bureaucracy.

Unknown speaker 01:17

The project that we have started was initially 20 mega, but then has developed far beyond the initial target, and we have now reached 110 mega. We have obtained from a reliable specialized electricity advisory group an evaluation that defines what is the accumulated value today of what is defined the pipeline.

Unknown speaker 01:45

And this value is 27 million point five euros. So it's quite an important size, which demonstrates that the pipeline has worked, accumulating new value for the shareholder of Zenit. What is the pipeline?

Unknown speaker 02:02

It's not a pipe containing oil or gas or gasoline in the electricity sector. In Italy, at least, the pipeline means the compound of projects, one after the other, like in a pipe, where eventually this project will become ready to build, then built, and then in operation.

Unknown speaker 02:24

Our focus is to bring them all in ready to build. The value in the market will be, as I said, 27.5 million Euro. And then our strategy, which has been already announced to the public, is to sell 50% of them.

Unknown speaker 02:41

This 50% of them represent the value that we will cash out selling them, which is approximately 13,750. So this is what we have so far built this year, which is a great contribution to our diminished balance sheet and profit and loss account after the sequestration and the robbery of the Tunisians.

Unknown speaker 03:10

Okay, thank you. And if we move on to another part of your business, what is the strategic rationale for spinning off the uranium division? Okay, so we have clarified that we are very pleased and convinced, despite the fact that it's still to be metabolized by the public of our shareholders, of which I am one, the largest one.

Unknown speaker 03:34

We will speak about that in a few minutes. About the solar park. So we are very convinced that it is a great business and we proceed with it and this will give stability of income, producing electricity and some capital gain by the sale.

Unknown speaker 03:50

But the other big event has been in the last months the acquisition of a site in which there are two licenses that they are to be granted to us subject only to the VIA. VIA is an environmental permit of the Republic of Italy where these two sites are located.

Unknown speaker 04:15

It happens that these two sites are the ones that have been drilled for 24 years from 1960 to 1984 in Lombardy and were the only two real mines in Italy. And this constitute a quite important achievement.

Unknown speaker 04:36

It is not speculation, is not areometrics, is not some geological work that has solved the mystery of the underground. Some question marks are 25 kilometers of tunnels which have been drilled at the quality and the time of 1960, 1980.

Unknown speaker 04:55

So this gives evidence of deposit on site which evaluated at the spot price of uranium at the moment have brought an indication of 1.1 billion American dollars. So that is a very big business which will take its time.

Unknown speaker 05:16

That he has of course his challenges. These challenges are well known to the Swedish investors because of the same challenges that your parliament and your public opinion is going through, our public opinion as I feel to become a local, and at least in the public opinion.

Unknown speaker 05:36

And so this development of nuclear has its own challenges but certainly represents a very important step in the future of the transition, reducing to zero the fossil consumption. Because it's such an important business and inequivocally interesting and of great appeal, this business deserves a company of his own.

Unknown speaker 06:00

It cannot be mixed with the arbitration, it cannot be mixed with the production of electricity because he stands on his own. He is a business that deserves as well shareholders of different nature from the one that Zenitas, which are mainly like us, like me, private individuals.

Unknown speaker 06:21

And so we have thousands and thousands of Norwegian, Swedish and European private individuals. We have only one or two institutions, but instead uranium will appeal mainly to big institutions that will invest for the future of the project.

Unknown speaker 06:38

So we plan to spin off the uranium division in a separate listed company in the first quarter of 2026 and we are working hard with advisor in selecting the jurisdiction where the company is listed and or will be listed and then the mode of making this spinning off in a way that this reward the Zenith energy shareholders that are keeping with us during this long journey toward the goals that we are discussing today,

Unknown speaker 07:16

which are the solar, the uranium and the arbitration. Okay, that will be very interesting to follow in recent time then. Senate is approaching final hearings in a major EXID arbitration. With the current market cap around 265 million Norwegian kronas and claimed damages for about $572.65 million.

Unknown speaker 07:43

Is the timing for the final hearing in April 2026 still on track? Yes, absolutely, yes. So this is unless exceptional circumstances. The 20th of April is the day of the hearing, of the final hearing of the EXIED case, which has the claim that you have mentioned, 573 million American dollars.

Unknown speaker 08:07

And the news that appeared yesterday is that we have yet broadened our legal team with a third very important team of lawyers led by a lawyer that is a king counsel. And so this person has a great experience in oil and gas presently.

Unknown speaker 08:30

He has as well been of British education a total understanding of what is the core of the ECSED, which is not a contractual breach like the previous two, which are International Chamber of Commerce, so for contractual breaches, but is a treaty breach, so the treaty between the United Kingdom and Tunisia, which has been done in a very robust way by the British in 1970, and which protects very much the companies like our companies that are British companies.

Unknown speaker 09:03

Because sitting in London with our listing in the main market of London, when we created the investment subsidiary in Tunisia, we selected obviously some local companies, so British companies. So that is extremely reassuring to have two additional important lawyers, especially the head of the team is very important and relevant.

Unknown speaker 09:27

They are notable in English matters, which is the treaty, but as well they are francophone as the Exceed case is debated in French. So we are very much looking forward with more and more faith to the debate on the 20th April and to win this time.

Unknown speaker 09:45

And if you win, if Senate wins this arbitration, what will it mean to the company? Well, you know, the first thing that we want to repeat in a way to be transparent and reassuring the investors is that it will be an extraordinary dividend.

Unknown speaker 10:01

I'm a little bit superstitious, so I have not yet spent an enormous amount of time in the fiscal aspect for the investors about this dividend or other form of names that can be fiscally better for the Swedish or the Norwegian or the rest of the world investors.

Unknown speaker 10:22

And as we are here with the ZENA SDR separate listing in Spotlight, we are of course very careful to give something that permit people to be fiscally intelligent. But certainly there will be a dividend, but still will remain, hopefully, a lot of money for the development of Zenit.

Unknown speaker 10:44

Okay. Thank you, Mr. Andrea Catanio, for this update. Thank you for your time. And I also want to address the audience and thank you for watching us and see you again soon.
